reports (includes four quarterly supplements), \$3.00.

PREFACE

This report on the characteristics of new one-family homes in 1972 covers homes sold, contractor-built homes started and all homes completed (built for sale, contractor-built, owner-built and rental). It is part of the joint Bureau of the Census, Social and Economic Statistics Administration (SESA), U.S. Department of Commerce-U.S. Department of Housing and Urban Development study on housing sales which was started in 1962. This is the 10th annual report prepared for this program.

The chapter on new homes sold supplements the Housing Sales Survey information presented in the monthly reports of this series (C25). These reports provide information on new homes sold and for sale.

The Bureau of the Census is indebted to the thousands of respondent builders and owners of the homes included in the sample. Without their cooperation in providing the information, this report could not have been prepared. The Bureau also extends its appreciation to the field interviewers responsible for collecting the basic data.

General Introduction

This annual report is the tenth one issued in the C25 Series of Construction Reports, now entitled "Characteristics of New One-Family Homes." It is a joint publication of the Bureau of the Census, Social and Economic Statistics Administration, U.S. Department of Commerce and the U.S. Department of Housing and Urban Development.

The study of the characteristics of new one-family homes sold and contractor-built homes started was undertaken in 1962.¹ Though the number of owner-built homes started is available as early as 1963, a study of the characteristics of these homes was done only for the period 1966 to 1971. This report also covers characteristics of new one-family homes completed during 1971 and 1972. The C25 Series of Construction Reports consists of monthly and annual publications. The annual report gives data relating to each of the three categories of new homes—new homes sold and for sale, contractor-built homes, and owner-built and rental homes. The monthly report, however, relates only to new homes sold and for sale.

The characteristics of all new homes shown in the 1972 annual report include type of financing, number of square feet of floor area, number of bedrooms, number of bathrooms, type of foundation, number of fireplaces, number of stories, type of parking facility, type of exterior wall material, type of heating system, type of heating fuel, and whether or not the home has central air conditioning.

Chapter 1, New Housing Units Started and Completed, presents information principally for new privately owned one-family homes for the United States, for "inside" and "outside" Standard Metropolitan Statistical Areas, and for four regions. New one-family homes started and completed are also shown by purpose of construction.

The relationship of new one-family homes started for sale in any year to the number sold in the same year is complex. The total number of new homes sold in any

year includes all homes sold in the year regardless of the year in which they were started; some were started in a prior year, some will be started in a subsequent year, while the majority of homes sold in any year are, in fact, started in the same year. On the other hand, total new one-family homes started for sale in any year include only the homes actually started in that year. Some of the homes started in any year were sold prior to the year started, and some remain unsold at the end of the year. A small number of homes originally started for sale are subsequently transferred or withdrawn from the sales market and never appear in the count of homes sold. This group of homes includes homes which become contractor-built or owner-built or rental homes; buildings started as one-family homes but converted to 2 or more housing units or to nonresidential buildings; and homes withdrawn because plans to build were abandoned. For these reasons, the figures for homes started for sale in chapter 1 differ from the figures on homes sold in subsequent chapters. This same relationship exists for homes sold and for homes completed—built for sale. For contractor-built and owner-built homes the figures in chapter 1, however, are the same as in subsequent chapters, since all of the figures in all chapters are in terms of either homes started or completed.

Chapter 2, New Privately Owned One-Family Homes, gives data on new homes sold, contractor-built homes started, and owner-built homes started 1966 to 1971 and all new homes completed for the years 1971 and 1972. All available data on owner-built homes are presented in this chapter. Chapter 3 is limited to data for new homes sold; chapter 4 shows data for new homes for sale; chapter 5 shows data only for contractor-built homes started.

Characteristics reported for all new homes completed in 1972 show only slight changes from 1971. There were increases in the proportion of homes completed with 2 or more bathrooms, with a garage and with central air conditioning installed. The average square feet of floor area increased from 1,520 in 1971 to 1,555 in 1972. One significant change was in the type of heating fuel reported for homes completed. Gas decreased from 60 percent in 1971 to 54 percent in 1972 and electricity increased from 25 percent in 1971 to 31 percent in 1972.

¹Data originally published for 1962 are not fully consistent with those for subsequent years. The first annual report published is for the year 1963.

Several other sets of data relating to the information presented in chapter 2 are compiled within the Federal Government. These data are independently derived and, do not agree precisely with the figures contained in this annual report. In general, however, there is substantial agreement in broad terms. Three principal sources of such data may be mentioned:

1. Data on Operations of the Federal Housing Administration. The various publications of the FHA provide the best source of data on the activities of that agency and on the characteristics of the homes with FHA-insured mortgages. The data appearing in this annual report on sales of new homes financed with FHA-insured mortgages differ somewhat from the data compiled and published by the Federal Housing Administration partly because of differences in timing, partly because of differences in definition, and partly because one set of data results from a sample survey of builders while the other is derived from FHA operating records. The data contained in this annual report, however, provide the basis for comparison of new homes covered by FHA financing with new homes sold with other types of financing and are entirely adequate for this purpose.

2. Federal Home Loan Bank Board Series on Interest Rates and Other Characteristics of Conventional First Mortgage Loans. The Home Loan Bank Board series on conventional first mortgage loans on new homes includes information obtained from institutional mortgage lenders on the prices of new homes financed with conventional mortgages. These data, which are derived from different sources and use altogether independent samples, differ in detail from those presented in this annual report. Inclusion in this annual report of conventional mortgage loans made by individuals contributes to these differences.

3. 1967 Census of Governments. The Census Bureau's 1967 Census of Governments, in connection with its collection of data on assessed values of real property and the relationship between assessed value and sales price, provides information by States on the average sales price of new homes sold and on the number of measurable sales of new homes during a 6-month period generally in 1966. (See Volume 2, "Taxable Property Values," table 11.) These Census of Governments data are derived entirely independently of the data in this annual report. Allowing for the conceptual difference in timing, there is general agreement on the level of the average sales price. The large difference in the number of new homes sold, after allowance for the fact that the Census of Governments figures relate to a 6-month period only, is due to the limitation of the Census of Governments figures to "measurable sales only," omitting a variety of cases not appropriate to the purpose of that Census.

Chapter 3, New Homes Sold presents sales price and closely related information for new homes sold in the

United States. Summary data are given for the regions—Northeast, North Central, South, West—and for the types of financing—FHA-insured mortgages, VA-guaranteed mortgages, conventional mortgages, and cash and equivalent transactions. Among the sales price and related subjects examined are: median and average sales price of new homes sold, the amount of downpayment as a percent of sales price, the number of homes sold with closing costs included in the sales price, the number of homes financed with the aid of second mortgages, and the price per square foot of floor area—excluding the value of the improved lot.

During 1972, 118,000 new one-family homes were sold for \$21.9 billion. The number of homes sold increased 9 percent from the 656,000 new homes sold in 1971, and the total value of sales was up 18 percent from the \$18.6 billion of the previous year.

The average sales price of new homes sold during 1972 was \$30,500, 8 percent higher than 1971. The average floor area was 1,590 square feet, virtually unchanged from 1971. In 1972, the conventionally mortgaged homes had the highest average price—\$34,100; those sold with FHA-insured mortgages had the lowest average price—\$21,800. Regionally, the Northeast had the highest average sales price—\$35,700; the lowest was in the South \$28,500.

There was a significant increase in the proportion of new homes sold using electricity for heating—33 percent in 1972 compared with 26 percent in 1971. There was also a significant increase in homes sold with central air conditioning installed—47 percent in 1972 compared with 40 percent in 1971. Smaller increases occurred in the proportion of new homes sold with 2 or more bathrooms and with garages.

Chapter 4, New Homes for Sale, presents data for the United States and Regions on the number and intended sales price of homes for sale at the end of each year.

Chapter 5, the Contractor-Built Homes category, presents contract price and related information for contractor-built homes started in the United States. This category—contractor-built homes started—covers custom built homes; i.e., homes built by a single general contractor on the owner's land for the owner's occupancy. It differs from the new homes sold category presented in chapter 3 in that information for new homes sold relates to homes built for sale by an operative or speculative builder on land which the builder owns; this category also includes homes sold before the start of construction. Summary data are given in chapter 5 for the regions and the type of financing. These include median and average contract price, contract price per square foot of floor area—excluding value of improved lot, and characteristics of the homes.

During 1972, 252,000 contractor-built homes were started for \$6.4 billion. The number of contractor-built homes started increased 13 percent from the 223,000 started in 1971, and the total contract value was up 23 percent from the \$5.2 billion of the previous year.

The average contract price of contractor-built homes started during 1972 was \$25,300, 9 percent higher than 1971. In 1972, the North Central region had the highest average contract price—\$29,400; the lowest was in the South—\$22,800. The average floor area was 1,620 square feet, 3 percent higher than 1971.

There were increases in 1972 in the proportion of homes with a garage for two cars or more and the proportion with two bathrooms or more. The proportion of contractor-built homes started with a garage for two cars or more increased from 37 percent in 1971 to 41 percent in 1972, while those with 2 bathrooms or more increased from 44 percent in 1971 to 51 percent in 1972. There was a significant change between 1971 and 1972 in the type of heating fuel used for contractor-built homes started. The proportion with gas as the type of heating fuel used decreased from 47 to 40 percent between 1971 and 1972, while the proportion which used electricity increased from 40 to 48 percent between these two years.

¹Total homes with square feet of floor area reported equals 100 percent.

²Includes new homes completed—built for sale (whether sold or for sale by end of year), contractor-built and owner-built homes completed, and homes completed for rent (not shown separately).

³Includes all new homes sold during year, whether sold before started, while under construction, or after completion.

⁴Includes new homes completed—built for sale whether sold or for sale by end of year.

⁵Includes home started for rent in the years 1966 to 1970.

- Represents zero. Z Fewer than 500 homes or less than 0.5 percent.

¹This figure is less than total new homes sold for the United States and each location because it excludes homes sold for cash.

²For the years 1963 to 1969 a small number of homes with reports of zero downpayment were tabulated as having downpayment of 0.1 to 4.9 percent. The number of such homes in 1970 was 15,000. In 1971, homes with reports of zero downpayment were included in the zero downpayment category.

Table 24. Median Downpayment as a Percent of Sales Price by Location and Type of Financing: 1963 to 1972

(Data exclude homes sold for cash. Value of improved lot included in sales price of home. Median percent computed from unrounded figures)

X Not applicable.

¹Represents new homes offered for sale for the first time in 1972. Includes homes: authorized in 1972 whether or not started by the end of the year and not sold during any previous year; sold in 1972 and not authorized by permits until 1973 (most of these were not started in 1972). Excludes homes: authorized and sold in 1971 but started in 1972; sold in 1971 but authorized in 1972; and authorized and sold in 1973 but started in 1972.²These data include homes originally intended for sale but which were later transferred to the category "homes started for owner occupancy on owners' land", or to the rental market; converted to 2 or more housing units or to a nonresidential building; or removed because plans to build were abandoned. Distribution by intended sales price estimated from that reported for homes for sale on January 1, 1972.

APPENDIX A

Description of Survey

Survey Coverage

The data relating to this survey are based on monthly sample surveys conducted by the Bureau of the Census, Social and Economic Statistics Administration (SESA), U.S. Department of Commerce, under contract with the U.S. Department of Housing and Urban Development. This information is obtained through monthly interviews with the builders or owners of a national probability sample of new one-family homes for which building permits have been issued, or in nonpermit areas, on which construction has started.

The sales information in this report is based upon 25,900 homes reported sold in 1972, and the information on homes completed—built for sale is based upon 27,900 homes completed in 1972. The information on contractor-built homes started is based upon returns from 3,400 homes started in 1972, and the information on completions of contractor-built and owner-built homes is based upon 3,200 and 2,000 returns. The entire questionnaire used to collect information, "Survey of Housing Starts and Sales," SOC 900, is Appendix C of this report.

Since the survey is based on samples drawn from building permits issued in permit-issuing places and from homes on which construction is started in areas where building permits are not required, there is no practicable way to obtain information on a sale until the permit is issued, or, in nonpermit areas, construction is started. All new homes sold in 1972 and reported as late as the end of February 1973 are included in this report. It is estimated that by the end of February 1973 about 99 percent of the 1972 sales were reported. Imputations were made to cover the remaining 1 percent of the total number of new homes sold. All contractor-built homes and all owner-built homes either started or completed in 1972, and homes completed—built for sale in 1972 are included in this report. By the end of February 1973, all of the homes in these categories had been reported.

Sampling Variability

The statistics in this report are estimates from a sample survey. They are expected to differ from statistics from a complete census using the same schedules and procedures. Estimates based on a sample survey contain both sampling and nonsampling error. Sampling errors occur because observations are made only on a sample, not on the entire population. Nonsampling errors, such as errors in reporting and processing, occur both in censuses and sample surveys.

The sample used in this survey is one of a large number of samples of the same size that could have been selected using the same sample design. The standard error of a survey estimate is a measure of the variation among the estimates from all possible samples. Thus, it measures how closely an estimate from a particular sample approximates the average result of all possible samples. As calculated for this report, the standard error also measures some of the effect of response and processing errors, but does not reflect any systematic biases in the data should there be any.

The chances are about 68 out of 100 that the sample estimate would differ from the average value for all possible samples by less than one standard error; about 95 out of 100 that the sample estimate would differ by less than two standard errors. For economy, the standard errors shown in Tables A, B, and C are orders of magnitude of the standard errors of various estimates given in this report rather than the precise standard errors themselves.

The standard error of a percentage, using sample estimates of the numerator and denominator of the percentage, depend upon the magnitude of the percentage as well as on the magnitude of the base of the percentage. Estimated percentages are relatively more reliable than the corresponding absolute estimates of the numerator of the percentage.

Table A gives the standard errors for estimates of the number of new homes in any given category. Table B shows the standard errors for estimates of percentages of new homes in any given category, and table C gives the relative standard errors of estimates of median square feet of floor area and median sales price.

Illustrations of the use of tables of standard errors:
Table 18 shows that the estimate of the number of new homes sold in the Northeast region with sales price between \$22,500 and \$24,999 is 10,000. Table A shows that the estimated standard error of 10,000 is 700. That is, the chances are 68 out of 100 that had a census been taken of all new homes sold in 1972, the census count of homes sold in the Northeast with sales price between \$22,500 to \$24,999 would have been between 9,300 and 10,700 homes (10,000 plus or minus 700). The chances are 95 out of 100 that census results would have differed from the sample estimate by less than 1,400 or twice the standard error.

The estimate of 10,000 homes sold in the Northeast with sales price between \$22,500 and \$24,999 is approximately 13 percent of all homes sold with sales price between \$22,500 and \$24,999 (a total of 73,000 homes).

Although Table B does not show the standard error of 13 percent with a base of 73,000, a good approximation can be had by referring to the standard error for 10 percent on a base of 50,000, this is approximately 1.9 percentage points. That is, the chances are 68 out of 100 that had a complete census been taken, between 11.1 and 15.9 percent of the homes sold with sales price between \$22,500 and \$24,999 would have been in the

Northeast region. Chances are 95 out of 100 that the census results would have been within two standard errors (3.8 percentage points) of the sample estimate, or between 9.2 and 16.5 percent.

Table 20 shows that the estimate of the median sales price of new homes sold during 1972 with conventional financing was \$31,600. Table C shows that the relative standard error on this estimate is 1 percent. Chances are 68 out of 100 that had a complete census been taken, the census results on the median sales price of new homes sold during 1972 with conventional financing would be between \$31,284 and \$31,916. The chances are 95 out of 100 that the census results would have been within two standard errors of the sample estimate or between \$30,968 and \$32,232.

Table A. STANDARD ERRORS OF ESTIMATED NUMBERS FOR NEW ONE-FAMILY HOMES: 1972

APPENDIX B

Definitions

Appliances in Sales Price or Contract Price—The tabulations on appliances include only the selected appliances (stove, dishwasher, and refrigerator) which are included in the sales price or contract price at the time the original agreement is signed or the deposit made. These data include only the appliances that are included in the original agreement; that is, any appliances which are subsequently purchased from the builder and included in the sales price at the time of final settlement or in the final contract price are not included in this survey.

Bathrooms—For the purposes of this survey, a full bathroom is defined to include a toilet, a basin, and a bathtub and/or shower. A half-bathroom is defined to include a toilet and a basin. A quarter-bathroom is defined to include either a toilet or a basin. The quarter-bathrooms were reported in the southwestern part of the United States. If the respondent reported "1-1/4 bathrooms," the house was classified as a 1-bathroom home; if the respondent reported "1-1/4 and 1/4" bathrooms, the house was classified as having 1-1/2 bathrooms.

Bedrooms—A bedroom is defined to include finished rooms specifically designed to be used as bedrooms, but to exclude dens convertible to bedroom use and spaces in attics and basements which can be converted to bedrooms.

Closing Costs—The closing costs are the total estimated costs customarily chargeable to the buyer for items which are incidental to the transaction. These costs include mortgagee's initial service charge, cost of title search, charges for the preparation of deed and mortgage documents, mortgage tax, recording fees, and similar items. They include, in addition, for homes sold with FHA-insured mortgages, an examination or application fee. Items not included in closing costs are deposits for unaccrued taxes, insurance premiums, and similar items that are treated as prepayable expenses.

Contractor-Built Homes—This category includes all homes built for owner occupancy on owner's land, with construction under the supervision of a single general contractor.

Contract Price—The contract price used in this survey for contractor-built homes is the price on the original contract awarded to the general contractor. The contract price does not reflect any subsequent changes in the price resulting from change orders or from any other factors affecting the price of the home. It does not include the cost of any contracts awarded to a different contractor for work on the grounds around the house, nor does it include any proposed expenditures on the house after construction is completed by the general contractor. Finally, because the house is being built for the owner's occupancy on his own land, the contract price does not include the cost of land.

The median contract price is the contract price of the home which falls on the middle point in the total contractor-built homes started; the point is so chosen that half the homes were started with a contract price amount below that shown as the median amount and half with an amount above; the average—or arithmetic mean—contract price is obtained by dividing the sum of the total contract price amount reported for all homes in the annual report by the number of contractor-built homes started in the corresponding year.

Downpayment—The downpayment tabulated is the amount reported as agreed upon at the time the original sales agreement was signed or deposit accepted. Changes in type of financing, changes in sales price due to revised building specifications, and other causes may affect the size of the downpayment after the initial agreement. Any such changes made after the original sale is reported are not reflected in the tables.

Exterior Wall Material—The exterior wall material tabulated is the principal type of material covering the exterior wall, the material covering more than half of the exterior wall is tabulated as the principal type.

Financing, Type of—The type of financing tabulated in this survey is the type reported at the time the original sales agreement was signed or deposit accepted. However, changes in the type of financing do occur between the original contract signing and final settlement. These changes are not reflected in the tables. Homes financed by the Farmers Home Administration and homes financed with California Veteran's Mortgage loans are included with conventionally financed homes.

The FHA and VA type of financing data presented in this report tend to differ somewhat from that published directly by those agencies. This report reflects the type of financing reported at the time the original sales contract was signed and provides data on the relative importance of the various types of financing. For the actual number of FHA-insured and VA-guaranteed loans made for new homes at the time of final settlement, refer to the publications of the respective agencies. The data differ because of the difference in time periods between the signing of the original sales contract, the start of construction, and the insurance or guarantee of the mortgage, as well as the sampling variability in this survey.

Fireplace (indoor)—An indoor fireplace is defined as an open recess in a chimney in which a fire may be built. An indoor fireplace is usually constructed of brick, stone or other types of masonry and is a fixed and integral part of the building.

Floor Area—For this survey, floor area is defined as the floor area of all completely finished floor space, including space in basement and attic with finished walls, floors, and ceilings.

In concept, measurement is based on exterior dimensions. Measurements are taken to the outside of exterior walls for detached houses. Half stories are measured to the outside of enclosing partitions. Row houses are measured from the center-line of party walls and to the outside surface of the exterior walls. For purposes of this survey, where the floor area for a new home was reported in interior dimensions, the figure was converted to exterior dimensions by multiplying by a standard conversion factor of 1.08. A standard conversion factor of 1.04 was used to convert figures to exterior dimensions where it was not known whether the reported area was based on exterior or interior dimensions. Prior to 1969, the conversion factor of 1.04 was not used and these cases were considered as not reporting square foot area.

Geographic Region—The standard census geographic regions are used in the tables of this report. States contained in each region are as follows:

Northeast—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New

Jersey, and Pennsylvania; **North Central**—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas; **South**—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas; **West**—Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Alaska, and Hawaii.

Heating Systems—For purposes of this survey, heating systems are grouped into two built-in categories: (1) central heating systems including warm air ducted, hot water or steam systems; and (2) built-in heating systems for individual rooms—including electric baseboard, panel or radiant, floor or wall furnaces, and room or space heaters. A home heated with a portable unit is considered as having no built-in heating system.

New Homes Built for Sale Completed—This category includes new homes completed—built for sale whether sold or for sale by end of year.

New Homes Sold—The homes sold category includes all homes for which a sales contract has been signed between the seller and purchaser. This includes homes for which a sales contract is signed before construction is actually started; that is, homes sold from a model or from plans for which the builder has a signed contract before any work is started on the footings or foundations. It also includes homes sold while under construction or after completion; that is, homes built on speculation.

Owner-Built Homes—This category includes homes built for owner occupancy, on owner's land, under the supervision of the owner acting as his own general contractor: (1) In most cases built partly by owner and partly with paid help; (2) sometimes built entirely with the employment of subcontractors, and, (3) in a smaller number of cases, built entirely on a "do-it-yourself" basis.

Rental Homes—This category includes homes built for rent. Prior to 1971, these homes were included with the owner-built homes.

Response Rate—The overall response rate for all new homes covered by this survey is very high. Practically everyone asked responded to the questionnaire shown in appendix C. However, response to individual items varied. For the physical characteristics, such as number of bedroom or bathrooms, the response rate is within the range of 90 to 99 percent. Items with response rates somewhat lower are those related to the sales price of new homes sold or the contract price of contractor-built homes started.

In 1972, the lowest response rate for new homes sold is 70 percent for price per square foot of floor area—excluding value of improved lot; while the lowest response rate for contractor-built homes started is 78 percent for the contract price per square foot of floor area—excluding value of improved lot. However, tabulations for these items require reports on either the sales price or the contract price of the home as well as the number of square feet of floor area, and for new homes sold, the value of improved lot.

Sale—For the purpose of this survey, the sale of the new home occurs with the signing of a sales contract or the acceptance of a deposit. This survey does not follow through to the final stage of the sales transaction.

Sales Price—The sales price used in this survey is the price agreed upon between purchaser and seller (and reported by the latter) at the time the first sales contract is signed or deposit is made for the house. The sales price does not reflect any subsequent price changes resulting from change orders or from any other factors affecting the price of the house. Further more, the sales price does not include the cost of any "extras" or "options" paid for in cash by the purchaser or otherwise not included in the original sales price reported by the seller.

The median sales price is the sales price of the home which falls on the middle point in the total annual number of homes sold; the point is so chosen that half the homes were sold with a sales price amount below that shown as the median amount and half with an amount above; the average—or arithmetic mean—sales amount is obtained by dividing the sum of the total sales amount reported for all homes in the annual series by the number of homes sold in the corresponding year.

Stage of Construction—

Starts—A home is defined as started at the time of excavation for the footings or foundations.

Completions—A home is defined as completed when all finish flooring has been installed (or carpeting if used in place of finish flooring).

Story—That portion of a building between the floor and the ceiling or roof, or the next floor above in the case of a multistory house. A basement is not counted as a story even if it is finished as a den or recreation room.

Half story—A story finished as living accommodations located wholly or partly within the roof frame is considered a half story; it is tabulated in this survey as a whole story, for example, 1 and one-half stories is counted as 2.

Split level—Identifies a structure having floors on more than one level when the difference in some floor levels is less than 1 story. This definition is interpreted on the basis of local customs and may vary from area to area.

Standard Metropolitan Statistical Areas—The distribution of the data presented in this report between inside and outside Standard Metropolitan Statistical Areas (SMSA's) is based on the definitions published by the Bureau of the Budget in its recurring series Standard Metropolitan Statistical Areas. To the extent possible, the effort is made to use in each year the latest available definitions, incorporating the most recent (generally annual) amendments.

Value of Improved Lot—The value of the improved lot (developed lot) is the value assigned by the seller to the improved lot.

Section II - FOR HoSS, ES, EO, FR HOUSES

20a. Schedule number(s)				
b. Location of building(s)				
Where applicable, circle code numbers; for example, ① Yes				
21. Circle intent of house from item 13. (If HoSS, continue with 22; if ES, with 24; if EO or FR with 26.)	1 HoSS 3 EO 2 ES 4 FR	1 HoSS 3 EO 2 ES 4 FR	1 HoSS 3 EO 2 ES 4 FR	1 HoSS 3 EO 2 ES 4 FR
22. Was a deposit taken or a sales agreement signed for the house at...?	J F M A M J J A S O N D	J F M A M J J A S O N D	J F M A M J J A S O N D	J F M A M J J A S O N D
23. When was the deposit taken or sales agreement signed?	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.
24a. What is the sales price (contract price)?	\$	\$	\$	\$
b. (HoSS only) Does it include or exclude closing costs?	1 Inc 2 Exc	1 Inc 2 Exc	1 Inc 2 Exc	1 Inc 2 Exc
c. (HoSS only) Of this (repeat sales price), what is the value of the developed (improved) lot?	\$	\$	\$	\$
25. Does the sales (contract) price include a—				
a. Stove?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
b. Refrigerator?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
c. Dishwasher?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
d. Washing machine?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
e. Dryer?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
26. What type of financing was or will be arranged or will cash be paid? (If cash, circle PC and continue with 28a; if financed—)	1 FHA 4 PC 2 VA 5 DK 3 Conv 6 FmIA	1 FHA 4 PC 2 VA 5 DK 3 Conv 6 FmIA	1 FHA 4 PC 2 VA 5 DK 3 Conv 6 FmIA	1 FHA 4 PC 2 VA 5 DK 3 Conv 6 FmIA
27. What is the amount of the—				
a. Down payment?	\$	\$	\$	\$
b. First mortgage?	\$	\$	\$	\$
c. Secondary mortgages?	\$	\$	\$	\$
28a. What is the square foot area of completely finished floor space, including space in basement and attic with finished walls, floors, and ceilings?	Square feet	Square feet	Square feet	Square feet
b. Is this based on exterior or interior dimensions?	1 Ext 2 Int	1 Ext 2 Int	1 Ext 2 Int	1 Ext 2 Int
29. How many of the following are in the house?				
a. Bedrooms	0 1 2+	0 1 2+	0 1 2+	0 1 2+
b. Bathrooms	0 1 2+	0 1 2+	0 1 2+	0 1 2+
c. Stories (Enter M if split level)				
d. Indoor brick or stone fireplaces	0 1 2+	0 1 2+	0 1 2+	0 1 2+
30. Does the house have a—				
a. Garage, carport, neither? (If garage—) Is it for 1 (G1) or 2 or more (G2) cars?	1 G1 3 CP 2 G2 4 N	1 G1 3 CP 2 G2 4 N	1 G1 3 CP 2 G2 4 N	1 G1 3 CP 2 G2 4 N
b. Full or partial basement, crawl space or slab?	1 B 2 C 3 S	1 B 2 C 3 S	1 B 2 C 3 S	1 B 2 C 3 S
31. What is the principal type of exterior wall material?	1 W 5 ST 2 BR 6 BL 3 AS 7 OTH 4 AL	1 W 5 ST 2 BR 6 BL 3 AS 7 OTH 4 AL	1 W 5 ST 2 BR 6 BL 3 AS 7 OTH 4 AL	1 W 5 ST 2 BR 6 BL 3 AS 7 OTH 4 AL
32. What will the major type of heating fuel be for this house?	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth
33a. What type of central heating system will be installed? Warm Air Ducted, Hot Water or Steam, if neither—	1 WAD 2 HWS 3 EL 6 OTH 4 FF 7 None 5 RH	1 WAD 2 HWS 3 EL 6 OTH 4 FF 7 None 5 RH	1 WAD 2 HWS 3 EL 6 OTH 4 FF 7 None 5 RH	1 WAD 2 HWS 3 EL 6 OTH 4 FF 7 None 5 RH
b. What type of built-in heating will the house have? Electric (baseboard, panel, radiant), Floor or wall Furnaces, other Room or Space Heaters, OTHER, or none	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth	1 Elec 3 Oil 2 Gas 4 Oth
34. Will this house have central air conditioning?	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No	1 Yes 2 No
35. (If started) In which month will the house be completed?	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.
36. Is the house at (address) completed? (If Yes, enter month and year completed; enter red "X" in 35.)	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.	Mo. / Yr.
37. "X" HoSS with entries in 23 and 36 in RED ES, EO, or FR's with entries in 36
