## Methodology for Calculating FY 2023 Medians

## HUD PROCEDURE FOR ESTIMATING FY 2023 MEDIAN FAMILY INCOMES

## Background

The U.S. Department of Housing and Urban Development (HUD) is required by law to set income limits that determine the eligibility of applicants for HUD's assisted housing programs. HUD's major assisted housing programs include the Public Housing program, the project-based Section 8 program, the Section 8 Housing Choice and Project-Based Voucher programs, Section 202 housing for the elderly program, and Section 811 housing for persons with disabilities program. These income limits are set at certain percentages of an area's median family income (MFI). MFIs are also often referred to by users of these data and in other federal programs as area median incomes (AMIs).

## Geographic Definitions

HUD calculates median family incomes for metropolitan areas, which comprise one or more counties or county-equivalents ${ }^{1}$, and individual nonmetropolitan counties ${ }^{2}$. The geographic definitions of areas used for calculating median family incomes generally matches those used in HUD's calculation of Fair Market Rents. In determining the definitions of metropolitan areas, HUD uses the delineations of metropolitan statistical areas found in OMB Bulletin No. 18-04, issued September 14, 2018, as its starting point. The 2018 delineations are the most recent incorporated into American Community Survey (ACS) data described below. In many cases, HUD has split metropolitan statistical areas into smaller subareas, which HUD designates as "HUD Metropolitan Fair Market Rent Areas (HMFAs)."

## Median Family Income Basis

In estimating FY 2023 median family incomes, HUD uses median family ${ }^{3}$ income data (as opposed to median household income data) from the 2021 American Community Survey (ACS) and the Puerto Rico Community Survey (PRCS) as calculated by the Census Bureau. The Census Bureau produces two types of ACS estimates: the "one-year" data, which represent estimates as of 2021; and the "five-year" data, which represent estimates as of 2017-2021 (but are inflated to 2021 dollars). HUD would ordinarily have used the ACS 2020 data for FY 2023. However, due to interruptions to data collection caused by the Covid-19 pandemic, the Census Bureau did not release special tabulations of ACS 2020 one-year data. HUD requires special tabulations of the ACS to match its custom HMFA definitions described above.

For the FY 2023 medians, HUD requires that the margin of error be less than half of the estimate and that the survey median is based on at least 100 responses (as identified by a count indicator value of 4 or more in HUD's special tabulations of ACS data). If the current one-year or five-year estimate does not meet both conditions, HUD next examines the current and previous two five-year estimates. If at least two of these three estimates have margin of errors that are less than half their estimates, HUD takes the average of all such "minimally reliable" estimates (first inflating all values to the current ACS year) and uses this as the median family income basis. If less than two of the estimates are minimally reliable, HUD uses the median
family income estimate for the next largest geographic area which contains the area in question. For example, a single non-metropolitan county without a valid county-level median family income estimate will receive the estimate for the non-metropolitan portion of its state, while a HMFA will receive the estimate for its OMB-defined metropolitan area.

## CPI Inflation

HUD uses the 2021 American Community Survey (ACS) and Puerto Rico Community Survey (PRCS) median family income data (as opposed to household income data) as the basis of FY 2023 Income Limits for all areas of geography, except for the U.S. Virgin Islands and Guam, American Samoa, and the Northern Mariana Islands (the Pacific Islands). HUD uses an inflation forecast from the Congressional Budget Office (CBO) in updating ACS estimates. For FY 2023, CBO has produced a forecast CPI of 303.948, which divided by annual 2021 of 270.971 is 1.122 (an increase of 12.2 percent).

## Territories not Covered by the ACS

For the non-Puerto Rico Insular Areas of the United States, ${ }^{4}$ which currently lack the annual survey of ACS or PRCS, HUD uses 2020 Decennial Census data which collected income data from 2019. HUD uses national ACS median family income changes to update the 2019 median family income data to 2021. HUD then applies the same CPI adjustment used in ACS areas from 2021 to fiscal year 2023.
