National housing market indicators available as of January showed activity in housing markets was mixed. Trends in some of the top indicators for this month include:

- **Purchases of new homes increased in December for a third consecutive month.** New single-family home sales rose 2.3 percent to 616,000 units (SAAR) in December from a pace of 602,000 in November but were 26.6 percent lower year-over-year (y/y). Note that monthly data on new home sales tend to be volatile. For all of 2022, new home sales reached 644,000, down 16.5 percent from 771,000 in 2021 and their slowest pace since 2018. (Sources: HUD and Census Bureau)

- **Existing home sales fell for the eleventh consecutive month to their slowest pace since November 2010.** The National Association of REALTORS® (NAR) reported that December sales of existing homes (including single-family homes, townhomes, condominiums, and cooperatives) slipped 1.5 percent to 4.02 million units (SAAR) from a pace of 4.08 million in November and were 34 percent lower y/y. For all of 2022, existing home sales dropped 17.8 percent to 4.03 million units from 6.12 million in 2021 and the slowest pace since 2014. Because existing home sales are based on a closing, December sales reflect contract signings in October and November. Mortgage rates have trended down since September, and month-to-month (m/m) house prices have remained the same or declined in the past several months—all of which should help to improve demand. Inventories of existing homes are still lean, however.

- **New construction of single-family homes rose to their highest level since August.** Single-family housing starts increased 11.3 percent to 909,000 units (SAAR) in December from a revised pace of 817,000 units in November but were 25 percent lower y/y. Multifamily housing starts (5+ units in a structure), at 463,000 units (SAAR), fell 18.9 percent m/m and were 16.3 percent lower y/y. Note that m/m changes in multifamily starts are often volatile. Residential construction employment was up 3.2 percent y/y; residential construction costs were down 1.2 percent in December but up 6.9 percent y/y. For all of 2022, total construction of new homes reached 1,553 million units, 3.0 percent lower than in 2021 (1.601 million units and the strongest pace since 2006). New construction of single-family homes fell 10.6 percent, while starts on multifamily homes rose 14.5 percent in 2022. (Sources: HUD, Census Bureau and BLS)

- **Annual house price appreciation continued to decelerate in November, with annual gains ranging from 6.8 to 8.2 percent.** The Federal Housing Finance Agency (FHFA) seasonally adjusted purchase-only house price index for November estimated that home values were down 0.1 percent m/m and rose 8.2 percent y/y, down from an annual gain of 9.8 percent in October. The non-seasonally adjusted CoreLogic Case-Shiller® 20-City Home Price Index, posted a 0.8 percent m/m decline in home values in November and a 6.8 percent y/y increase, down from an 8.6 percent annual gain in October. Mortgage financing has become more expensive as the Federal Reserve raises interest rates, a process that began in April.

The annual growth rate of house prices peaked in the spring of 2022 and may well continue to decelerate. The home price data for both indices are based on real estate sales contracts signed in September and October with subsequent closings during November. (Both price indices are released with a 2-month lag.)

- **The inventory of homes for sale remained the same for new homes but fell for existing homes.** The listed inventory of new homes for sale, at 461,000 units at the end of December, was unchanged m/m but was 18.5 percent higher y/y. That inventory would support 9.0 months of sales at the current sales pace, down from 9.2 months in November due to an increase in sales. Available existing homes for sale, at 370,000 units in December, declined 13.4 percent m/m but were 10.2 percent higher y/y. That inventory represents a 2.9-month supply, down from 3.3 months in November. The long-term average for months’ supply of homes on the market is 6.0 months.

- **The U.S. homeownership rate fell slightly in the fourth quarter.** The national homeownership rate decreased to 65.9 percent in the fourth quarter of 2022 from 66.0 percent the previous quarter but was up from 65.5 percent a year ago. The historic norm since 1965 is 65.2 percent. (Source: Census Bureau)

- **Forbearance on mortgage loans remained the same.** The MBA Forbearance Survey shows the share of homeowners with mortgages in forbearance was 0.70 percent (351,000 households) in December, the same as in the previous month, but down from 1.41 percent (705,000 households) one year ago. The forbearance rate was only 0.25 percent of all home loans in the beginning of March 2020, before the economic effects of the COVID pandemic began to be felt.

- **Housing insecurity due to the pandemic remains elevated but has improved.** HUD analysis of the Census Household Pulse Survey (Week 53: January 4-16, 2022) shows that approximately 11.4 percent, or 5.57 million, homeowner households were behind on their mortgage payments in January, an improvement over 15.1 percent, or 6.96 million, households one year ago. An estimated 4.6 percent, or 2.13 million, renter households feared eviction was imminent in the next two months, down from 7.1 percent or 3.17 million a year ago. Under Treasury’s Emergency Rental Assistance (ERA) program, an estimated 2.84 million renters have applied for and received rental assistance. Approximately 5.57 percent, or 4.59 million, homeowner households were behind on their mortgage payments in January, an improvement over 6.66 percent, or 5.50 million in January of 2021. An estimated 1.12 percent, or 890,000 homeowners, feared foreclosure was imminent in the next two months.

- **The 30-year fixed-rate mortgage (FRM) continued to ease, reaching its lowest level since September.** The 30-year FRM reached its lowest level since September. The 30-year FRM reached an average weekly low in January of 6.13 percent the week ending January 26, 2023, down from the weekly low in December of 6.27 percent and the lowest average weekly rate since September (6.02 percent). The highest average weekly rate during that time frame was 7.08 percent in October and November. The mortgage rate was 3.55 percent one year ago. (Source: Freddie Mac)

</tr>
<tr>
<td>Homeownership Affordability</td>
<td>Monthly</td>
<td>National Association of REALTORS®</td>
<td>NAR's Housing Affordability (Fixed Rate) Index as reported. A value of 100 means that a family with the median income has exactly enough income to qualify for a mortgage on a median-priced home. An index above 100 signifies that a family earning the median income has more than enough income to qualify.</td>
</tr>
<tr>
<td>Rental Affordability</td>
<td>Quarterly</td>
<td>HUD</td>
<td>HUD’s Rental Affordability Index measures whether a typical renter household has enough income to qualify for a lease on a typical rental home at the national level based on the most recent price and income data. A typical renter household is one that earns median income and a typical rental home is a median-priced rental unit. It is assumed that a renter household can qualify for a lease if the annual rent is not greater than 30 percent of the renter household’s annual income. A value of 100 means that a renter household with median income has exactly enough income to qualify for a lease on a median-priced rental home. An index value above 100 signifies that a household earning the median income of renter households has more than enough income to qualify. For more information on HUD’s rental affordability index and methodology, see the Second Quarter 2016 issue of HUD’s National Housing Market Summary on their U.S. Housing Market Conditions website: <a href="http://www.huduser.gov/portal/ushtmchome.html">http://www.huduser.gov/portal/ushtmchome.html</a>.</td>

B. Notes on Charts

1. Monthly house price trends, shown as changes in respective house price indices applied to a common base price set equal to the median price of an existing home sold in January 2003, as reported by the National Association of REALTORS®. Indices shown: S&P/CoreLogic Case-Shiller 20-metro composite index (NSA), January 2000 = 100, FHA monthly (purchase-only) index for U.S. (SA), January 1991 = 100, and CoreLogic-Distressed Sales Excluded (Monthly) for U.S. (NSA), January 2000 = 100. Also see additional note below in Section C on the CoreLogic HPI.

2. Reported seasonally adjusted annual rates for new and existing home sales.

3. A comparison of the affordability of renting a home to purchasing a home. HUD’s Quarterly Rental Affordability Index is compared to NAR’s Composite Quarterly Affordability Index. See note in Section A on Rental Affordability.

4. Filings of a notice of default or scheduled foreclosure auction, depending on which action starts the foreclosure process in a state, are reported for foreclosure starts. Foreclosure completions are properties entering REO. Both as reported by ATOM Data Solutions (formerly RealtyTrac).

5. FHA market shares are FHA purchase and refinance originations divided by HUD estimates of purchase and refinance mortgage originations, as noted in “Mortgage Originations” above. See additional note below on FHA market share.

6. See notes in Section A on renter and homeowner households’ ability to make rental or mortgage payments. The results represent a “No” in response to the question, “Is this household currently caught up on their rent or mortgage payment?” Results prior to the two-week period ending August 31, 2020, are not presented because the survey question then was, “Did you pay your last month’s rent or mortgage payment on time?”

7. See notes in Section A on renter and homeowner households fearful of eviction or foreclosure. For renter households, the results represent a “Very Likely” or “Somewhat Likely” response to the question, “How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?” For homeowner households, the results represent a “Very Likely” or “Somewhat Likely” response to the question, “How likely is it that your household will have to leave this home within the next two months because of foreclosure?”
### SOURCES AND METHODOLOGY

#### C. Additional Notes

As of November 17, 2022, Freddie Mac no longer surveys lenders, but instead, bases its rates on thousands of applications received from lenders and submitted to Freddie Mac when a borrower applies for a mortgage.

Beginning in May 2019, NAR replaced its Monthly Composite Housing Affordability Index (HAI), which was based on 30-year fixed rate mortgages (FRM) and adjustable rate mortgages (ARM), with a Fixed HAI based only on the 30-year fixed rate mortgage.

Black Knight enhanced their database as of December 2017 data, increasing their database coverage by nearly 1 million additional loans through several new contributors and improved coverage of certain types of data. In addition, HUD added filters to make sure all FHA and VA loans were excluded from the data to ensure reporting of only conventional loans. The November 2017 changes in reported data are mainly due to the additional filters.

FHA market share estimates were based on new methodology beginning with the October 2013 report; estimates were revised back through Q1 2011. See the FHA Market Share report on their website for an explanation of the new methodology: [http://portal.hud.gov/hudportal/HUD?src=/program_offices/housing/rmra/oe/rpts/fhamktsh/fhamktqtrly](http://portal.hud.gov/hudportal/HUD?src=/program_offices/housing/rmra/oe/rpts/fhamktsh/fhamktqtrly).

The estimate for first-time buyers was 26 percent for 2022, based on NAR's 2022 annual report, A Profile of Home Buyers and Sellers. The estimate was down sharply from 34 percent for 2021 with the October 2021 release of findings from their annual survey and the lowest rate since NAR began tracking the data in 1981. The annual reporting of first-time buyers differs from NAR's monthly REALTORS® Confidence Index survey because the annual survey, for the most part, represents purchases of homes by owner-occupants and does not include purchases by investors, as in the monthly survey.

CoreLogic's House Price Index (HPI) estimates are based on new methodology beginning with their June 2016 report, which includes data through April 2016. A variety of modeling and other enhancements to their HPI and its forecast, including a 14-percent expansion in the number of transaction pairs, were made.

MBA switched to reporting monthly forbearance data in place of weekly data starting November 2021.

Data for Week 52, the first Pulse Survey of Phase 3.7, started December 9, 2022 and continues through February 13, 2023. During Phase 3.7, data collection will continue with the sequence of every other two weeks.

The BLS Consumer Population Survey/Housing Vacancy Survey (CPS/HVS) is conducted by the Census Bureau and collects data on indicators used in this report, including the homeownership rate, housing units held off market, and housing rental prices. The Bureau views the 2Q 2020 through 2Q 2021 period as a break in series because COVID-19 prevented normal data collection procedures. The Census Bureau suspended in-person interviews on March 20, 2020 and conducted the survey for the rest of the first quarter and the entirety of the second quarter solely by telephone interviews. In-person interviews were incrementally added back in the subsequent four quarters with respective rates of 63, 94, 98, and 99 percent of in-person interviews allowed. Normal data collection procedures resumed in Q3 2021 with less than one-half of one percent of in-person interviews restricted. As an example of the break in series, the national homeownership rate, at 65.3 percent in the first quarter of 2020, was estimated to have jumped to 67.9 in the second quarter of 2020 and decline to 65.4 percent by the second quarter of 2021. The changes in survey methods likely contributed to the sharp increase and following decline in the homeownership rate during that time period. See Source and Accuracy release [https://www.census.gov/housing/hvs/index.html](https://www.census.gov/housing/hvs/index.html).
