Housing Market Indicators Monthly Update

January 2024

U.S. Department of Housing and Urban Development

National housing market indicators available as of January showed overall activity in housing markets was mixed. Trends in some of the top indicators for this month include:

- Purchases of new homes rose. New single-family home sales increased 8.0 percent to 664,000 units (SAAR) in December from an upwardly revised pace of 615,000 in November and were 4.4 percent higher year-over-year (y/y). For all of 2023, new home sales reached 668,000, up 4.2 percent from 641,000 in 2022 and their fastest pace since 2021. New home sales are based on purchase agreements, unlike existing home sales which are based on closings. Note that monthly data on new home sales tend to be volatile. (Sources: HUD and Census Bureau)
- Existing home sales slipped to the slowest pace since August 2010. The National Association of REALTORS® (NAR) reported that December sales of existing homes (including singlefamily homes, townhomes, condominiums, and cooperatives) decreased 1.0 percent to 3.78 million units (SAAR) from 3.82 million in November and were down 6.2 percent y/y. For all of 2023, existing home sales dropped 18.7 percent to 4.09 million units from 5.03 million in 2022 and were the slowest pace since 1995. Because existing home sales are based on closings, December sales reflect contract signings in October and November. Monthto-month (m/m) house prices have increased modestly in the last several months, but mortgage rates have been relatively high, and inventories of existing homes for sale are still lean.
- Construction of single-family homes declined. Single-family housing starts, at 1.027 million units (SAAR) in December, fell 8.6 percent from 1.124 million units in November but were 15.8 percent higher y/y. Multifamily housing starts (5+ units in a structure), at 417,000 units (SAAR), rose 7.5 percent from 388,000 units in November but were 9.5 percent lower y/y. Note that m/m changes in multifamily starts are often volatile. For all of 2023, total construction of new homes reached 1.413 million units, 9.0 percent lower than 1.553 million units in 2022. New construction of single-family homes fell 6.0 percent, while starts on multifamily homes fell 14.2 percent in 2023. (Sources: HUD, Census Bureau)
- Annual house price gains accelerated in November, with increases ranging from 5.4 to 6.6 percent. The Federal Housing Finance Agency (FHFA) seasonally adjusted (SA) purchase-only house price index for November estimated that home values rose 0.3 percent m/m and 6.6 percent y/y, up from an annual gain of 6.3 percent in October. The non-SA CoreLogic Case-Shiller[®] 20-City Home Price Index posted a 0.2 percent m/m decrease (0.1 percent SA increase) in home values in November and a 5.4-percent y/y gain, up from a 4.9-percent annual gain in October. Mortgage

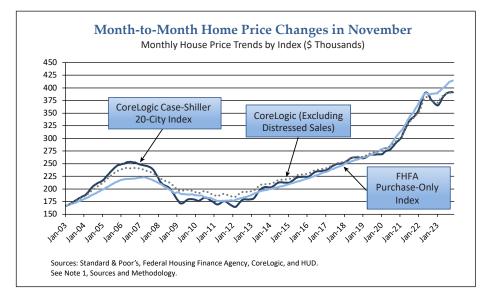

financing became more expensive as the Federal Reserve raised interest rates, a process that began in April 2022. House prices peaked in June 2022 and began to decline modestly, as the higher rates put downward pressure on prices. That trend reversed itself in February 2023, however, as current owners became increasingly reluctant to sell. The FHFA (SA) index now stands at 6.4 percent above its June 2022 peak and the Case-Shiller index is 1.9 percent (SA) above its June peak. (Both price indices are released with a 2-month lag.)

- The inventory of homes for sale increased for new homes but fell for existing homes. The listed inventory of new homes for sale, at 453,000 units at the end of December, was up 0.9 percent m/m and 0.4 percent y/y. That inventory would support 8.2 months of sales at the current sales pace, down from 8.8 months in November due to the large increase in sales. Available existing homes for sale, at 1.000 million units in December, decreased 11.5 percent m/m but were up 4.2 percent y/y. That inventory represents a 3.2-month supply, down from 3.5 months in November. The long-term average for months' supply of homes on the market is 6.0 months.
- The U.S. homeownership rate declined in the fourth quarter. The national homeownership rate fell to 65.7 percent in the fourth quarter of 2023 from 66.0 percent in the third quarter and was down from 65.9 percent one year ago. The historic norm since 1965 is 65.2 percent. (Source: Census Bureau)
- Forbearance on mortgage loans continued to decline. The MBA Forbearance Survey indicates the share of homeowners with mortgages in forbearance was 0.23 percent (115,000 households) in December, down from 0.26 percent in November and less than the 0.25-percent forbearance rate of all home loans in the beginning of March 2020, before the economic effects of the COVID pandemic began to be felt. The forbearance rate was 0.70 percent (351,000 households) one year ago.
- Rates on 30-year fixed-rate mortgages (FRM) declined in January to their lowest level since May 2023. The average weekly 30-year FRM reached a low of 6.60 percent the week ending January 18, down slightly from a low of 6.61 percent in December. The mortgage rate rose steadily in 2022 as the Fed increased interest rates, reaching a high of 7.08 percent in November 2022 and then trended down to a low of 6.09 percent in February 2023 as inflation appeared to be retreating. Mortgage rates climbed again, peaking at 7.79 percent in October 2023, as indications of economic strength put upward pressure on rates, but have descended in the past three months with the slowing of inflation. SOURCES AND METHODOLOGY

A. Items in Table			
Description	Frequency	Sources	Notes on Methodology
Mortgage Rates (30-Yr FRM)	Weekly	Freddie Mac	As reported for 30-year fixed rate mortgages (FRM). See note in Section C for basis of rates as of November 2022.
Homeownership Affordability	Monthly	National Association of REALTORS®	NAR's Housing Affordability (Fixed Rate) Index as reported. A value of 100 means that a family with the median income has exactly enough income to qualify for a mortgage on a median-priced home at current underwriting standards. An index above 100 signifies that a family earning the median income has more than enough income to qualify.
Rental Affordability	Quarterly	HUD	HUD's Rental Affordability Index measures whether a renter household with median income has enough income to qualify for a lease on a median-priced rental home at the national level based on the most recent price and income data. It is based on the assumption that a renter household can qualify for a lease if the annual rent is not greater than 30 percent of the renter household's annual income. A value of 100 means that a renter household with median income has exactly enough income to qualify for a lease on a median-priced rental home. An index value above 100 signifies that a household earning the median income of renter households has more than enough income to qualify. For more information on HUD's rental affordability index and methodology, see the Second Quarter 2016 issue of HUD's National Housing Market Summary on their U.S. Housing Market Conditions website: http://www.huduser.gov/portal/ushmc/home.html.
Home Prices			
CoreLogic Case-Shiller (NSA)	Monthly	Standard and Poor's	Case-Shiller 20-metro composite index, January 2000 = 100. Standard and Poor's recommends use of non-seasonally adjusted (NSA) index when making monthly comparisons.
FHFA (SA)	Monthly	Federal Housing Finance Agency	FHFA monthly (purchase-only) index for U.S., January 1991 = 100.
CoreLogic - Excluding Distressed Sales (NSA)	Monthly	CoreLogic	CoreLogic national combined index, distressed sales excluded, January 2000 = 100. (Only available as NSA). Also see additional note in Section C below on the CoreLogic HPI.
Home Sales (SAAR)			
New	Monthly	HUD and Census Bureau	Seasonally adjusted annual rates. A newly constructed house is considered sold when either a sales contract has been signed or a deposit accepted, even if this occurs before construction has actually started.
Existing	Monthly	National Association of REALTORS®	Seasonally adjusted annual rates. Existing-home sales—which include single-family, townhomes, condominiums and co-ops—are based on transaction closings. This differs from the U.S. Census Bureau's series on new single-family home sales, which are based on contracts or the acceptance of a deposit.
First-Time Buyers	Monthly	NAR, Census Bureau, and HUD	Sum of seasonally adjusted new and existing home sales (above) multiplied by National Association of REALTORS® annual estimate of first-time buyer share of existing home sales.
Distressed Sales (NSA)	Monthly	CoreLogic	Short sales and REO (Real Estate Owned) sales as a percentage of total existing home sales (current month subject to revision).
Housing Starts Total (SAAR)	Monthly	HUD and Census Bureau	Housing starts are divided into three components: single-family, multifamily, and two-to-four unit structures. Start of construction occurs when excavation begins for the footings or foundation of a building. As of September 1992, housing starts include units being totally rebuilt on an existing foundation.
Single-Family (SAAR)	Monthly	HUD and Census Bureau	Single-family housing includes fully detached, semi-detached (semi-attached, side-by-side), townhouses, and row houses. For attached units, each must be separated from the adjacent unit by a ground-to-roof firewall to be classified as a single-family structure. Also, these units must not share common facilities (i.e., heating/air-conditioning systems, plumbing, attic, or basement). Units built one on top of another and those built side-by-side that do not have a ground-to-roof firewall or have common facilities are not considered single-family units.
Multifamily (SAAR)	Monthly	HUD and Census Bureau	Multifamily housing has five or more units in a structure.
Housing Supply New Homes for Sale (SA)	Monthly	HUD and Census Bureau	As reported.
New Homes for Sale - Months' Supply (SA)	Monthly	HUD and Census Bureau	As reported.
Existing Homes for Sale (NSA)	Monthly	National Association of REALTORS®	As reported.
Existing Homes - Months' Supply	Monthly	National Association of REALTORS®	
Vacant Units Held off Market	Quarterly	Census Bureau	As reported in Census CPS/HPS Table 4. Estimates of Housing Inventory, line item "Year-round vacant, held off market for reasons other than occasional use, or usually reside elsewhere." Vacant units can be held off the market for a variety of reasons.
Mortgage Originations			
Refinance Originations	Quarterly	Mortgage Bankers Association and HUD	HUD estimate of the number of refinance originations based on MBA estimate of dollar volume of refinance originations.
Purchase Originations	Quarterly	Mortgage Bankers Association and HUD	HUD estimate of the number of home purchase originations based on MBA estimate of dollar volume of home purchase originations.
FHA Originations			
Refinance Originations	Monthly	HUD	FHA originations reported as of date of loan closing. Estimate for current month scaled upward due to
Purchase Originations	Monthly	HUD	normal reporting lag and shown as preliminary.
Purchases by First-Time Buyers	Monthly	HUD

B. Notes on Charts

- 1. Monthly house price trends, shown as changes in respective house price indices applied to a common base price set equal to the median price of an existing home sold in January 2003, as reported by the National Association of REALTORS[®]. Indices shown: S&P/CoreLogic Case-Shiller 20-metro composite index (NSA), January 2000 = 100, FHFA monthly (purchase-only) index for U.S. (SA), January 1991 = 100, and CoreLogic-Distressed Sales Excluded (Monthly) for U.S. (NSA), January 2000 = 100. Also see additional note below in Section C on the CoreLogic HPI.
- 2. Reported seasonally adjusted annual rates for new and existing home sales.
- 3. A comparison of the affordability of renting a home to purchasing a home. HUD's Quarterly Rental Affordability Index is compared to NAR's Composite Quarterly Affordability Index. See note in Section A on Rental Affordability.
- 4. Filings of a notice of default or scheduled foreclosure auction, depending on which action starts the foreclosure process in a state, are reported for foreclosure starts. Foreclosure completions are properties entering REO. Both as reported by ATTOM Data Solutions (formerly RealtyTrac).
- 5. FHA market shares are FHA purchase and refinance originations divided by HUD estimates of purchase and refinance mortgage originations, as noted in "Mortgage Originations" above. See additional note below on FHA market share.
- 6. See notes in Section A on renter and homeowner households' ability to make rental or mortgage payments. The results represent a "No" in response to the question, "Is this household currently caught up on their rent or mortgage payment?" Results prior to the two-week period ending August 31, 2020, are not presented because the survey question then was, "Did you pay your last month's rent or mortgage payment on time?"
- 7. See notes in Section A on renter and homeowner households fearful of eviction or foreclosure. For renter households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?" For homeowner households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?" For homeowner households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home within the next two months because of foreclosure?"

Housing Market Indicators Monthly Update | January 2024

SOURCES AND METHODOLOGY

C. Additional Notes

As of November 17, 2022, Freddie Mac no longer surveys lenders, but instead, bases its mortgage rate estimates on thousands of applications received from lenders and submitted to Freddie Mac when a borrower applies for a mortgage.

Beginning in May 2019, NAR replaced its Monthly Composite Housing Affordability Index (HAI), which was based on 30-year fixed rate mortgages (FRM) and adjustable rate mortgages (ARM), with a Fixed HAI based only on the 30-year fixed rate mortgage.

Black Knight enhanced their database as of December 2017 data, increasing their database coverage by nearly 1 million additional loans through several new contributors and improved coverage of certain types of data. In addition, HUD added filters to make sure all FHA and VA loans were excluded from the data to ensure reporting of only conventional loans. The November 2017 changes in reported data are mainly due to the additional filters.

FHA market share estimates were based on new methodology beginning with the October 2013 report; estimates were revised back through Q1 2011. See the FHA Market Share report on their website for an explanation of the new methodology: http://portal.hud.gov/hudportal/HUD?src=/program_offices/housing/rmra/oe/rpts/fhamktsh/fhamktqtrly.

The estimate for first-time buyers was 26 percent for 2022, based on NAR's 2022 annual report, A Profile of Home Buyers and Sellers. The estimate was down sharply from 34 percent for 2021 with the October 2021 release of findings from their annual survey and the lowest rate since NAR began tracking the data in 1981. The annual reporting of first-time buyers differs from NAR's monthly REALTORS® Confidence Index survey because the annual survey, for the most part, represents purchases of homes by owner-occupants and does not include purchases by investors, as in the monthly survey.

CoreLogic's House Price Index (HPI) estimates are based on new methodology beginning with their June 2016 report, which includes data through April 2016. A variety of modeling and other enhancements to their HPI and its forecast, including a 14-percent expansion in the number of transaction pairs, were made.

MBA switched to reporting monthly forbearance data in place of weekly data starting November 2021.

Data Phase 4.0 started January 9, 2024 and will continue through April 1, 2024. During Phase 4.0, data collection will be continuous instead of being performed every other two weeks, as was done in previous phases. Data will be released for three cycles on the following dates: February 5, March 4, and April 1.

The BLS Consumer Population Survey/Housing Vacancy Survey (CPS/HVS) is conducted by the Census Bureau and collects data on indicators used in this report, including the homeownership rate, housing units held off market, and housing rental prices. The Bureau views the 2Q 2020 through 2Q 2021 period as a break in series because COVID-19 prevented normal data collection procedures. The Census Bureau suspended in-person interviews on March 20, 2020 and conducted the survey for the rest of the first quarter and the entirety of the second quarter solely by telephone interviews. In-person interviews were incrementally added back in the subsequent four quarters with respective rates of 63, 94, 98, and 99 percent of in-person interviews allowed. Normal data collection procedures resumed in Q3 2021 with less than one-half of one percent of in-person interviews restricted. As an example of the break in series, the national homeownership rate, at 65.3 percent in the first quarter of 2020, was estimated to have jumped to 67.9 in the second quarter of 2020 and decline to 55.4 percent by the second quarter of 2021. The changes in survey methods likely contributed to the sharp increase and following decline in the homeownership rate during that time period. See Source and Accuracy release https://www.census.gov/housing/hws/index.html.
