Housing Market Indicators Monthly Update

May 2019

National housing market indicators available as of May show activity in housing markets was mixed overall. Trends in some of the top indicators for this month include:

- Purchases of new homes fell after reaching an 11-year high the previous month. New single-family home sales decreased 6.9 percent to 673,000 units (SAAR) in April but reached an upwardly revised high of 723,000 in March, the highest pace since October 2007. Sales were up 7.0 percent from a year ago and were down in all regions except the Northeast. Note that monthly data on new home sales can be volatile and are often revised. (Sources: HUD and Census Bureau)
- Sales of previously owned (existing) homes slowed slightly. The National Association of Realtors[®] (NAR) reported that April sales of existing homes (including single-family homes, townhomes, condominiums, and cooperatives) dropped 0.4 percent to 5.19 million (SAAR) and were down 4.4 percent from a year earlier. Sales were down or remained the same in all regions except the West.
- New home construction rose. Total housing starts were up 5.7 percent in April to 1.24 million units (SAAR). New construction was up in the Northeast and Midwest regions. Single-family housing starts increased 6.2 percent to 854,000 homes (SAAR) but were down 4.3 percent from a year earlier. Multifamily housing starts (5 or more units in a structure), at 359,000 units (SAAR), rose 2.3 percent from March and 1.4 percent from a year earlier. Note that month-to-month changes in the construction of multifamily homes are often volatile. (Sources: HUD and Census Bureau)
- Year-over-year house price increases continued to moderate, with annual gains ranging from 3 to 5 percent. The Federal Housing Finance Agency (FHFA) seasonally adjusted purchaseonly house price index for March estimated that home values rose 0.1 percent over the previous month and 5.0 percent over the previous year, down slightly from a 5.1-percent annual gain in February. The FHFA index shows that U.S. home values are now 21 percent above their peak, set in March 2007 during the housing bubble, and stand 53 percent above the low point reached in May 2011. Another index tracked in the Monthly Update, the non-seasonally adjusted (NSA) CoreLogic Case-Shiller® 20-City Home Price Index posted a 0.7-percent increase in home values in March and year-over-year returns of 2.7 percent, down from a 3.0-percent annual gain recorded

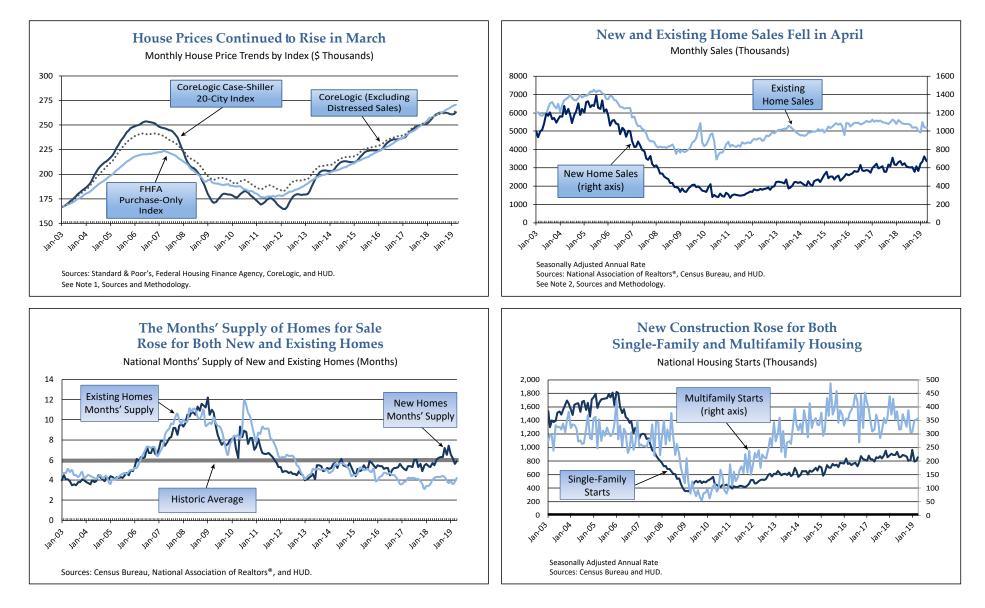

for February. A leveling off or decline in month-over-month home values for an NSA index might be expected at this time of year, when sales slow after the primary homebuying season (spring and summer), and house prices typically flatten or decline. (The FHFA and CoreLogic Case-Shiller[®] price indices are released with a 2-month lag.)

- Inventory of homes on the market rose again for existing homes. The listed inventory of new homes for sale at the end of April was down marginally (-0.9 percent) from the previous month but up 10.7 percent year-over-year to 332,000 available properties. The inventory would support 5.9 months of sales at the current sales pace, up from 5.6 months in March. Available existing homes for sale, at 1.83 million units in April, were 9.6 percent higher than the previous month and 1.7 percent greater than a year ago. The listed inventory represents a 4.2-month supply, up from 3.8 months in March. A shortage of homes for sale—especially at the lower end of the market—has been a constraint on purchases for several years. Despite an annual increase in purchases of existing homes priced \$250,000 and above, sales of existing homes valued below \$100,000 declined by 10.0 percent and sales of homes priced from \$100,000 to \$250,000 declined by 1.0 percent over the same period, suggesting a shortage of affordable housing.
- Mortgage rates dropped in May. The 30-year fixed rate mortgage (FRM) reached an average weekly low in May of 3.99 percent the week ending May 30, down from April's weekly low of 4.08 percent the week ending April 4. One year ago, the 30-year FRM was 4.56 percent. (Source: Freddie Mac)
- The affordability of renting a home declined. HUD's Rental Affordability Index (RAI), at 106.0 in the first quarter of 2019, fell 5.3 percent from the previous quarter and was down 2.1 percent over the four-quarter period. The drop in the affordability of renting a home resulted from a 5.9-percent increase in the real, or inflation-adjusted, median price of leased homes, which was only partially offset by a 0.3-percent increase in the inflation-adjusted median income of renter households. Rental affordability is only 1 percent above its low point reached in the third quarter of 2018. Note that a RAI value of greater than 100.0 indicates that a renter household with median income has more than enough income to qualify for a median-priced rental home. According to NAR's composite homeownership affordability index, at 154.6 in the first guarter, the affordability of purchasing a home increased 5.7 percent from the previous guarter but was down 3.1 percent over the four-guarter period.

SOURCES AND METHODOLOGY

Description	Freeseware	Courses	Notos en Mathadalam	
Description	Frequency		Notes on Methodology	
Mortgage Rates (30-Yr FRM) Homeownership Affordability	Weekly Monthly	Freddie Mac National Association of Realtors [*]	median income has exactly enough income to qualify for a mortgage on a median-priced home. An in-	
Rental Affordability	Quarterly	HUD	above 100 signifies that a family earning the median income has more than enough income to qual HUD's Rental Affordability Index measures whether a typical renter household has enough income to qualify for a lease on a typical rental home at the national level based on the most recent price and income data. A typical renter household is one that earns median income and a typical rental home at median-priced rental unit. It is assumed that a renter household can qualify for a lease if the annirent is not greater than 30 percent of the renter household's annual income. A value of 100 means renter household with median income has exactly enough income to qualify for a lease on a median priced rental home. An index value above 100 signifies that a household earning the median incom of renter households has more than enough income to qualify. For more information on HUD's rent affordability index and methodology, see the Second Quarter 2016 issue of HUD's National Housing Market Summary on their U.S. Housing Market Conditions website: https://www.huduser.gov/portaushor.	
Home Prices				
CoreLogic Case-Shiller (NSA)	Monthly	Standard and Poor's	Case-Shiller 20-metro composite index, January 2000 = 100. Standard and Poor's recommends use of non-seasonally adjusted (NSA) index when making monthly comparisons.	
FHFA (SA)	Monthly	Federal Housing Finance Agency	FHFA monthly (purchase-only) index for US, January 1991 = 100.	
CoreLogic - Excluding Distressed Sales (NSA)	Monthly	CoreLogic	CoreLogic national combined index, distressed sales excluded, January 2000 = 100. (Only available as NSA). Also see additional note in Section C below on the CoreLogic HPI.	
Home Sales (SAAR)				
New	Monthly	HUD and Census Bureau	Seasonally adjusted annual rates. A newly constructed house is considered sold when either a sales contract has been signed or a deposit accepted, even if this occurs before construction has actually starte	
Existing	Monthly	National Association of Realtors*	Seasonally adjusted annual rates. Existing-home sales—which include single-family, townhomes, condominiums and co-ops—are based on transaction closings. This differs from the U.S. Census Bureau's series on new single-family home sales, which are based on contracts or the acceptance of a deposit.	
First-Time Buyers	Monthly	NAR, Census Bureau, and HUD	Sum of seasonally adjusted new and existing home sales (above) multiplied by National Association of Realtors [®] annual estimate of first-time buyer share of existing home sales.	
Distressed Sales (NSA)	Monthly	CoreLogic	Short sales and REO (Real Estate Owned) sales as a percentage of total existing home sales (current month subject to revision).	
Housing Starts				
Total (SAAR)	Monthly	HUD and Census Bureau	Housing starts are divided into three components: single-family, multifamily, and two-to-four unit structure Start of construction occurs when excavation begins for the footings or foundation of a building. As of September 1992, housing starts include units being totally rebuilt on an existing foundation.	
Single-Family (SAAR)	Monthly	HUD and Census Bureau	Single-family housing includes fully detached, semi-detached (semi-attached, side-by-side), townhouses are row houses. For attached units, each must be separated from the adjacent unit by a ground-to-roof firew to be classified as a single-family structure. Also, these units must not share common facilities (i.e., heatin air-conditioning systems, plumbing, attic, or basement). Units built one on top of another and those built side-by-side that do not have a ground-to-roof firewall or have common facilities are not considered single family units.	
Multifamily (SAAR)	Monthly	HUD and Census Bureau	Multifamily housing has five or more units in a structure.	
Housing Supply New Homes for Sale (SA)	Monthly	HUD and Census Bureau	As reported.	
New Homes for Sale - Months' Supply (SA)	Monthly	HUD and Census Bureau	As reported.	
Existing Homes for Sale (NSA)	Monthly	National Association of Realtors*	As reported.	
Existing Homes - Months' Supply	Monthly	National Association of Realtors*	As reported.	
Vacant Units Held Off Market	Quarterly	Census Bureau	As reported in Census CPS/HPS Table 4. Estimates of Housing Inventory, line item "Year-round vacant, held off market for reasons other than occasional use or usually reside elsewhere." Vacant units can b held off the market for a variety of reasons.	
Mortgage Originations				
Refinance Originations	Quarterly	Mortgage Bankers Association and HUD	HUD estimate of refinance originations based on MBA estimate of dollar volume of refinance origination	
Purchase Originations	Quarterly	Mortgage Bankers Association and HUD	HUD estimate of home purchase originations based on MBA estimate of dollar volume of home purchase originations.

B. Notes on Charts

1. Monthly house price trends, shown as changes in respective house price indices applied to a common base price set equal to the median price of an existing home sold in January 2003, as reported by the National Association of Realtors[®]. Indices shown: S&P/CoreLogic Case-Shiller 20-metro composite index (NSA), January 2000 = 100, FHFA monthly (purchase-only) index for U.S. (SA), January 1991 = 100, and CoreLogic-Distressed Sales Excluded (Monthly) for U.S. (NSA), January 2000 =100. Also see additional note below in Section C on the CoreLogic HPI.

2. Reported seasonally adjusted annual rates for new and existing home sales.

- 3. A comparison of the affordability of renting a home to purchasing a home, added as of the September 2016 release. HUD's Quarterly Rental Affordability Index is compared to NAR's Composite Quarterly Affordability Index. See note above on Rental Affordability.
- 4. Filings of a notice of default or scheduled foreclosure auction, depending on which action starts the foreclosure process in a state, are reported for foreclosure starts. Foreclosure completions are properties entering REO. Both as reported by ATTOM Data Solutions (formerly RealtyTrac).
- 5. FHA market shares are FHA purchase and refinance originations divided by HUD estimates of purchase and refinance mortgage originations, as noted in "Mortgage Originations" above. See additional note below on FHA market share.

C. Additional Notes

Black Knight enhanced their database as of December 2017 data, increasing their database coverage by nearly 1 million additional loans through several new contributors and improved coverage of certain types of data. In addition, HUD added filters to make sure all FHA and VA loans were excluded from the data to ensure reporting of only conventional loans. The November 2017 changes in reported data are mainly due to the additional filters.

FHA Market Share data were updated in the June 2017 report based on the most recent HMDA data and revised house price estimates. FHA market share estimates were based on new methodology beginning with the October 2013 report; estimates were revised back through Q1 2011. See the FHA Market Share report on their website for an explanation of the new methodology: http://portal.hud.gov/hudportal/HUD?src=/program_offices/housing/rmra/oe/rpts/fhamktsh/fhamktqtrly.

The estimate for first-time buyers was revised downward from 35 percent for 2016 to 34 percent for 2017 with the October 2017 release of the NAR Profile of Home Buyers and Sellers 2017 report. The annual reporting of first-time buyers differs from NAR's monthly Realtors Confidence Index survey because the annual survey, for the most part, represents purchases of homes by owner-occupants and does not include purchases by investors, as in the monthly survey.

CoreLogic's House Price Index (HPI) estimates are based on new methodology beginning with their June 2016 report, which includes data through April 2016. A variety of modeling and other enhancements to their HPI and its forecast, including a 14-percent expansion in the number of transaction pairs, were made.
