# Housing Market Indicators Monthly Update

## October 2023

U.S. Department of Housing and Urban Development

National housing market indicators available as of October showed overall activity in housing markets improved. Trends in some of the top indicators for this month include:

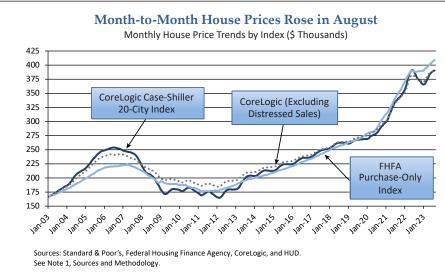

- Purchases of new homes rose. New single-family home sales climbed 12.3 percent to 759,000 units (SAAR) in September from an upwardly revised pace of 676,000 in August and were 33.9 percent higher year-over-year (y/y). Sales rose in all four Census regions. New home sales are based on purchase agreements, unlike existing home sales which are based on closings. Note that monthly data on new home sales tend to be volatile. (Sources: HUD and Census Bureau)
- Existing home sales fell to their lowest pace since October 2010. The National Association of REALTORS® (NAR) reported that September sales of existing homes (including single-family homes, townhomes, condominiums, and cooperatives) slipped 2.0 percent to 3.96 million units (SAAR) from 4.04 million in August and were down 15.4 percent y/y. Purchases rose in the Northeast but declined in the other three Census regions. Because existing home sales are based on closings, September sales reflect contract signings in July and August. Month-tomonth (m/m) house prices have increased modestly in the last several months, but mortgage rates have trended up recently, and inventories of existing homes for sale are still lean.
- Construction of new homes rose. Single-family housing starts, at 963,000 units (SAAR) in September, increased 3.2 percent from 933,000 units in August and were 8.6 percent higher y/y. Multifamily housing starts (5+ units in a structure), at 383,000 units (SAAR), rose 17.1 percent from 327,000 units in August but were 31.5 percent lower y/y. Note that m/m changes in multifamily starts are often volatile. Total housing starts, at 1.358 million units (SAAR), were up 7.0 percent m/m but were down 7.2 percent y/y. (Sources: HUD, Census Bureau)
- Annual house prices accelerated in August, with annual increases ranging from 2.2 to 5.6 percent. The Federal Housing Finance Agency (FHFA) seasonally adjusted (SA) purchase-only house price index for August estimated that home values rose 0.6 percent m/m and 5.6 percent y/y, up from an annual gain of 4.6 percent in July. The non-SA CoreLogic Case-Shiller 20-City Home Price Index, posted a 0.3 percent m/m increase (1.0 percent SA) in home values in August and a 2.2 percent y/y gain, up from a 0.2-percent annual gain in July. Mortgage financing has become more expensive as the Federal Reserve raises interest rates, a process that began in April 2022. House prices peaked in June 2022 and began to decline modestly but that trend has reversed itself recently. The FHFA (SA) index is now 4.7 percent above its previous June 2022 peak and the Case-Shiller index now stands at 0.5 percent (SA) above its June 2022 peak. (Both price indices are released with a 2-month lag.)

- The inventory of homes for sale increased for new and existing homes. The listed inventory of new homes for sale, at 435,000 units at the end of September, was up 0.7 percent m/m but down 5.4 percent y/y. That inventory would support 6.9 months of sales at the current sales pace, down from 7.7 months in August due to the large increase in sales. Available existing homes for sale, at 1.13 million units in September, rose 2.7 percent m/m but were down 8.1 percent y/y. That inventory represents a 3.4-month supply, up from 3.3 months in August. The long-term average for months' supply of homes on the market is 6.0 months.
- The U.S. homeownership rate increased in the third quarter. The national homeownership rate rose to 66.0 percent in the third quarter of 2023 from 65.9 percent in the second quarter and was the same as a year ago. The historic norm since 1965 is 65.2 percent. (Source: Census Bureau)
- Forbearance on mortgage loans continued to decline. The MBA Forbearance Survey indicates the share of homeowners with mortgages in forbearance was 0.31 percent (155,000 households) in September, down from 0.33 percent in August and 0.69 percent (347,000 households) one year ago. The forbearance rate was only 0.25 percent of all home loans in the beginning of March 2020, before the economic effects of the COVID pandemic began to be felt.
- Housing insecurity appears to have begun to stabilize during the past year. HUD analysis of the <u>Census Household Pulse</u> <u>Survey</u> (Week 62: September 20 - October 2) shows that approximately 12.0 percent, or 5.51 million, renter households were behind on their rental payments, down from 12.8 percent, or 5.88 million, one year ago. An estimated 4.5 percent, or 2.08 million, renter households feared eviction was imminent in the next two months, down from 4.9 percent, or 2.26 million y/y. Approximately 5.44 percent, or 4.49 million, homeowner households were behind on their mortgage payments in October, up from 5.15 percent, or 4.25 million, y/y. An estimated 0.98 percent, or 810,000 homeowners, feared foreclosure was imminent in the next two months, up from 0.91 percent, or 750,000 homeowners y/y.
- The 30-year fixed-rate mortgage (FRM) is approaching eight percent. The average weekly 30-year FRM was 7.79 percent the week ending October 26, up from a high of 7.31 percent the previous month. The mortgage rate rose steadily in 2022 as the Fed increased interest rates, reaching a high of 7.08 percent in November 2022 and then trended down to a low of 6.09 percent in February 2023 as inflation appeared to be retreating. Indications of ongoing economic strength have recently put upward pressure on mortgage rates. (Source: Freddie Mac)

#### **B. Notes on Charts**

1. Monthly house price trends, shown as changes in respective house price indices applied to a common base price set equal to the median price of an existing home sold in January 2003, as reported by the National Association of REALTORS<sup>®</sup>. Indices shown: S&P/CoreLogic Case-Shiller 20-metro composite index (NSA), January 2000 = 100, FHFA monthly (purchase-only) index for U.S. (SA), January 1991 = 100, and CoreLogic-Distressed Sales Excluded (Monthly) for U.S. (NSA), January 2000 = 100. Also see additional note below in Section C on the CoreLogic HPI.

2. Reported seasonally adjusted annual rates for new and existing home sales.

3. A comparison of the affordability of renting a home to purchasing a home. HUD's Quarterly Rental Affordability Index is compared to NAR's Composite Quarterly Affordability Index. See note in Section A on Rental Affordability.

- 4. Filings of a notice of default or scheduled foreclosure auction, depending on which action starts the foreclosure process in a state, are reported for foreclosure starts. Foreclosure completions are properties entering REO. Both as reported by ATTOM Data Solutions (formerly RealtyTrac).
- 5. FHA market shares are FHA purchase and refinance originations divided by HUD estimates of purchase and refinance mortgage originations, as noted in "Mortgage Originations" above. See additional note below on FHA market share.
- 6. See notes in Section A on renter and homeowner households' ability to make rental or mortgage payments. The results represent a "No" in response to the question, "Is this household currently caught up on their rent or mortgage payment?" Results prior to the two-week period ending August 31, 2020, are not presented because the survey question then was, "Did you pay your last month's rent or mortgage payment on time?"
- 7. See notes in Section A on renter and homeowner households fearful of eviction or foreclosure. For renter households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?" For homeowner households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?" For homeowner households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home or apartment within the next two months because of eviction?" For homeowner households, the results represent a "Very Likely" or "Somewhat Likely" response to the question, "How likely is it that your household will have to leave this home within the next two months because of foreclosure?"

Housing Market Indicators Monthly Update | October 2023

### SOURCES AND METHODOLOGY

#### **C. Additional Notes**

As of November 17, 2022, Freddie Mac no longer surveys lenders, but instead, bases its mortgage rate estimates on thousands of applications received from lenders and submitted to Freddie Mac when a borrower applies for a mortgage.

Beginning in May 2019, NAR replaced its Monthly Composite Housing Affordability Index (HAI), which was based on 30-year fixed rate mortgages (FRM) and adjustable rate mortgages (ARM), with a Fixed HAI based only on the 30-year fixed rate mortgage.

Black Knight enhanced their database as of December 2017 data, increasing their database coverage by nearly 1 million additional loans through several new contributors and improved coverage of certain types of data. In addition, HUD added filters to make sure all FHA and VA loans were excluded from the data to ensure reporting of only conventional loans. The November 2017 changes in reported data are mainly due to the additional filters.

FHA market share estimates were based on new methodology beginning with the October 2013 report; estimates were revised back through Q1 2011. See the FHA Market Share report on their website for an explanation of the new methodology: http://portal.hud.gov/hudportal/HUD?src=/program\_offices/housing/rmra/oe/rpts/fhamktsh/fhamktqtrly.

The estimate for first-time buyers was 26 percent for 2022, based on NAR's 2022 annual report, A Profile of Home Buyers and Sellers. The estimate was down sharply from 34 percent for 2021 with the October 2021 release of findings from their annual survey and the lowest rate since NAR began tracking the data in 1981. The annual reporting of first-time buyers differs from NAR's monthly REALTORS® Confidence Index survey because the annual survey, for the most part, represents purchases of homes by owner-occupants and does not include purchases by investors, as in the monthly survey.

CoreLogic's House Price Index (HPI) estimates are based on new methodology beginning with their June 2016 report, which includes data through April 2016. A variety of modeling and other enhancements to their HPI and its forecast, including a 14-percent expansion in the number of transaction pairs, were made.

MBA switched to reporting monthly forbearance data in place of weekly data starting November 2021.

Data for Week 61, the first Pulse Survey of Phase 3.10, started August 23, 2023 and continues through October 30, 2023. During Phase 3.10, data collection will continue with the sequence of every other two weeks.

The BLS Consumer Population Survey/Housing Vacancy Survey (CPS/HVS) is conducted by the Census Bureau and collects data on indicators used in this report, including the homeownership rate, housing units held off market, and housing rental prices. The Bureau views the 2Q 2020 through 2Q 2021 period as a break in series because COVID-19 prevented normal data collection procedures. The Census Bureau usepended in-person interviews on March 20, 2020 and conducted the survey for the rest of the first quarter and the entirety of the second quarter solely by telephone interviews. In-person interviews were incrementally added back in the subsequent four quarters with respective rates of 63, 94, 98, and 99 percent of in-person interviews allowed. Normal data collection procedures resumed in Q3 2021 with less than one-half of one percent of in-person interviews restricted. As an example of the break in series, the national homeownership rate, at 65.3 percent in the first quarter of 2020, was estimated to have jumped to 67.9 in the second quarter of 2020 and decline to 65.4 percent by the second quarter of 2021. The changes in survey methods likely contributed to the sharp increase and following decline in the homeownership rate during that time period. See Source and Accuracy release https://www.census.gov/housing/hvs/index.html.
