## Understanding Whom the LIHTC Serves

## Data on Tenants in LIHTC Units

 as of December 31, 2017
# Understanding Whom the LIHTC Serves: Data on Tenants in LIHTC Units as of December 31, 2017 

Office of Policy Development and Research
U.S. Department of Housing and Urban Development

## Message From the Assistant Secretary

It is my pleasure to present this report, Understanding Whom the LIHTC Program Serves: Tenants in LIHTC Units as of December 31, 2017. The LIHTC is a critical tool for creating and preserving affordable rental housing for low-income households and this report serves to provide a better understanding of those whom the LIHTC Program serves As mandated through the Housing and Economic Recovery Act of 2008, state agencies administering the Program are required to submit demographic and economic data on LIHTC tenants to the U.S. Department of Housing and Urban Development (HUD). This report marks the fifth release of said national data on LIHTC tenants.

This report reflects a tremendous effort from the state and local housing finance agencies that administer the LIHTC. These agencies work with LIHTC property managers to ensure data is collected and properly submitted to HUD while they also administer the LIHTC and often other housing programs. The National Council of State Housing Agencies (the membership organization for agencies administering the LIHTC Program) has been an invaluable partner as we have worked with states to improve processes and data quality.

This report provides summary tables of state tenant data received for tenants as of December 2017. There are numerous caveats on the coverage of these data-which are far from complete in some statesand for some specific variables-, as discussed in section III. Each table in the report is structured to provide readers with the information needed to make informed decisions about where the coverage and data are best, both in terms of which states and which variables.

I thank all those who worked to make this report possible and whose continuing commitment will refine it to better help policy and practice in the future.

Seth D. Appleton<br>Assistant Secretary for Policy Development \& Research<br>Department of Housing and Urban Development

## I. Introduction

In 2008, Congress passed the Housing and Economic Recovery Act (HERA), which, among other things, requires each housing finance agency (HFA) that administers the low-income housing tax credit (LIHTC) to submit certain demographic and economic information on tenants in LIHTC units to the U.S. Department of Housing and Urban Development (HUD) according to standards determined by the Secretary of HUD. HERA specifically requires HFAs to submit to HUD information concerning race, ethnicity, family composition, age, income, use of rental assistance, disability status, and monthly rental payments of households residing in LIHTC properties. A more detailed background of this data collection is available in the original report, Understanding Whom the LIHTC Program Serves: Tenants in LIHTC Units as of December 31, 2012, which is available on huduser.gov.

Most of the information presented in this document was collected by the administering state HFAs as part of program compliance enforcement. Although tenant income and rent information are collected in accordance with specific program rules, some HFAs have not fully adopted the HUD standards for collecting demographic information. Thus, although income and rent information were collected across HFAs using fairly uniform standards and definitions, the demographic information was not standardized and, for some HFAs, not collected at all.

Finally, HUD's administrative responsibility in the LIHTC Program is strictly limited to the designation of Difficult Development Areas (DDAs) and Qualified Census Tracts (QCTs). HUD is not involved in enforcing the statutory or regulatory compliance of LIHTC properties unless HUD subsidies are present. The HUD collection of tenant data, although required by statute, is not used in program administration.

This report complies with the HERA mandate to publicly release the collected information. Although the information reported here is not inclusive of all tenants served by the LIHTC, it provides a useful picture of the program's beneficiaries. The information presented within was received by HUD in the fall of 2018 and includes tenants in LIHTC units as of December 31, 2017. Table 1 highlights the differences between the 2016 and 2017 data submissions. Tables 2 and 3 provide an assessment of property, unit, and tenant coverage by state, indicating completeness across the reporting categories. The remaining tables present the information as required by HERA, with additional information on completeness as warranted.

HERA = Housing and Economic Recovery Act. LIHTC = low-income housing tax credit. PIS = LIHTC properties placed in service database.
a Neither the 2016 nor 2017 totals include tenant data from one of New York City's suballocators, the Department of Housing Preservation \& Development.
Note: The 2016 data are identical to those reported in Data on Tenants in LIHTC Units as of December 31, 2016, and do not include information on properties placed in service prior to 2017 that was reported with the 2017 PIS data collection.

## II. Comparison of 2016 and 2017 Data Submissions

Table 1 provides a comparison of the HUD 2016 and 2017 property and tenant data to provide a basic understanding of how the data presented in this report compare with data in the previous report. The 2016 data presented in Table 1 do not include updated information on properties placed in service prior to 2017 that were reported with the 2017 LIHTC properties placed in service (PIS) data collection. ${ }^{1}$ The changes between 2016 and 2017 all represent net changes in either total properties or total units.

In aggregate, a net decrease of 684 active properties containing 48,094 units was recorded in the HUD 2017 LIHTC PIS database compared with the 2016 version. This decrease was solely due to the elimination of duplicate records and was not due to a decrease in the actual number of active properties. States with these losses due to elimination of duplicates are highlighted across the first six columns.

For the HERA-mandated tenant data, a net additional 2,183 properties containing 75,646 units were reported in the 2017 data compared with the number in the 2016 data. The increase reflects both an increase in the stock of LIHTC units-that is, those placed in service in 2017-and newly reported information on units not submitted in the previous collection. The highlighted rows in the last six columns indicate states whose total unit counts are lower in the 2017 HERA data than in the 2016 data.

[^1]
## III. Assessing Completeness of 2017 Tenant Data

The LIHTC is administered by 66 state-level and, in limited instances, substate allocating HFAs (for simplicity, hereafter referred to as "states"). ${ }^{2}$ Several states separate administrative functions among multiple state agencies or local suballocators. The District of Columbia, Massachusetts, and New York separate functions related to the allocation of tax credits and the issuance of tax-exempt private activity bonds between two agencies. Compliance for all properties in the District of Columbia and Massachusetts, however, is conducted by a single agency in each state. Illinois, Minnesota, and New York allow local suballocators to award LIHTCs in certain cities or counties. The city of Chicago has authority to award credits and administer the program within city limits. New York City and several northern counties ${ }^{3}$ receive suballocations from New York state. Minnesota allows seven local governments ${ }^{4}$ to allocate tax credits. ${ }^{5}$

## A. States Submitting Tenant Data

HUD requests tenant data and property characteristics from the 64 agencies that conduct program compliance. ${ }^{6}$ One of the HFAs administering the LIHTC in New York City—the New York City Department of Housing Preservation \& Development (HPD)—did not submit 2016 or 2017 tenant information. LIHTC Properties under the purview of the New York City HPD are therefore not included in the following summary tables. The following sections explain how the submitted information may be incomplete for each of the states.

## B. Properties in the Tenant Data

The HUD collection of LIHTC tenant data applies to all active LIHTC properties, including those in the extended-use period. Many states, however, were unable to submit information for all active properties for several reasons. First, most states simplify or decrease the stringency of compliance rules after Year 15 , which lessens or eliminates certain information otherwise collected for compliance. For example, annual income recertifications may no longer be required, because the Next Available Unit Rule does not apply during the extended-use period. Thus, states may not have previously maintained compliance information for properties in the extended-use period. Second, some states previously accepted Tenant Income Certification (TIC) forms from smaller properties in hard copy as opposed to electronically, because independent owners, who may not have the ability to submit electronically, manage many of these properties. Converting or hand entering the information into electronic compliance and reporting systems requires considerable time, and some states were not able to complete this type of laborintensive work. Third, HERA permits states to forgo annual income recertification of tenants if 100 percent of a building's units are income or rent-restricted. Income information from tenants in these

[^2]properties, therefore, may not be available or, if available, may not be current. To present an appropriate comparison, HUD's tabulation of income relies on incomes certified in 2016, 2017, or $2018 .{ }^{7}$

One method of assessing the completeness of each state's HERA-mandated tenant data is to compare the total number of properties the data contain with the number of properties reported to HUD through its LIHTC PIS data collection, ${ }^{8}$ summarized in Table 2. The time period covered in the HUD PIS data collection is consistent with the tenant collection and currently includes properties placed in service through 2017. The HUD PIS database also has known undercounting, primarily for the most recently collected placed-inservice years. ${ }^{9}$ In addition, the PIS database also fails to correctly identify some properties that are no longer monitored for program compliance, which inflates the true number of properties in service. Hence, the databases are not expected to be 100 percent complete, and, from the data available to HUD, it is not possible to provide a definitive assessment of completeness based on one number. Rather, comparisons across the two sources of data suggest areas in which issues of incomplete data, in either data source, may be larger.

Overall, 39,742 properties were reported as in service and monitored for LIHTC compliance in 2017. State HFAs, however, submitted tenant information for 40,409 properties. ${ }^{10}$ Ten states-Arkansas, the District of Columbia, Hawaii, Missouri, Oklahoma, Tennessee, Utah, the U.S. Virgin Islands, West Virginia, and Wyoming-reported fewer units than in their previous submission. These changes are shown in Table 1.

## C. Low-Income Housing Tax Credit Rent-Restricted Units

The HERA-mandated collection of LIHTC tenant data is intended to include all rent-restricted LIHTC units. Because the HUD PIS data include primarily only property addresses and, in only limited cases, building addresses, it is not possible to match actual units between the two datasets. Instead, Table 2 sums the number of units from matched properties in the PIS database and reported units from matched properties in the tenant collection. Across all states, 2.658 million active LIHTC units are in the HUD PIS database. State HFAs, however, reported data on tenants in 2.180 million units through the HERAmandated tenant submission to HUD. Almost nine-tenths ( 87.5 percent) of the units reported in the HERA data are in properties also in the PIS database.

Although information is submitted on a unit basis, the information in this report focuses primarily on households or individual members, such as heads of household. The difference between reported units and total number of households is the number of vacant units. The vacancy rate of reported units was approximately 4.5 percent.

The aggregate count of reported units increased slightly to 2.180 million units compared with 2.104 million units in the 2016 data, reflecting better overall reporting and newly placed-in-service properties. ${ }^{11}$ Alaska, Illinois, and New Jersey provided significantly more units in their 2017 submissions than for 2016. Several states - most notably the District of Columbia, Tennessee, and, to a lesser extent, Utah-

[^3]submitted considerably fewer units than in their previous submissions. The decreases were generally due to fewer properties being reported.

## D. Household Members

Much of the information required by HERA focuses on households or individual household members. As required by HERA, HUD requests household-level information, such as rent and income, and individual member information, such as race, ethnicity, and disability status. In addition, HUD requests information on a household member's age and relationship to the head of the household, both of which can be used to determine household composition, which is a HERA-required reporting category. One state, Florida, provided data for only one member per household, reported as the head of the household. ${ }^{12}$ In addition, not all states reported all certified household members when reporting on individual household members, which affects the extent to which their data can be used to report on all tenants versus all households. Completeness of data reporting for some analyses, such as tabulations of household composition, is difficult to assess in states with incomplete data on all household members. Hence, for tables presenting information on individuals as opposed to households, it is important to have some sense of the coverage of household members.

States do provide information on household size, which is used to determine the maximum applicable income limit during household income certification. When all household members are included, household size equals the number of household members for whom data are submitted. Table 3 compares household size at certification with the number of household members actually reported in the tenant data. The first column reports the share of households for which household size at certification was not reported - that is, households for which HUD is unable to determine whether all household members are included in the tenant data. Reporting of household size is nearly complete overall; household size is missing in 6.7 percent of all reported households, but almost all of those are households in New York and Tennessee. Tennessee did not report household size for any of its reported households, and New York did not report household size for almost 64 percent of its reported households. With the exception of Alaska, which did not report household size for at least one-fifth of its reported households, and New York, Tennessee, and Florida, which provided information for only one household member per unit, this variable can be used to assess the completeness of household members in the tenant data.

[^4]
## IV. Race and Ethnicity of Tenants

The HUD LIHTC Tenant Data Collection Form requests race data according to standards set by the U.S. Office of Management and Budget and also used by the HUD rental assistance and multifamily housing programs. Although most of the information requested on the HUD LIHTC Tenant Data Collection Form is required and necessary for program compliance by the state HFAs, race and ethnicity are not. Before the HERA-mandated HUD collection, many states did not collect any race or ethnicity information, whereas others collected similar information using categories or standards different from those established by HUD. The incorporation, or modification, of race and ethnicity data into states' TIC forms caused a delay in their ability to report this information to HUD. This delay was caused, in part, by the process of amending the state TIC forms to request this information, but also by the need to collect this new information from all LIHTC tenants. Many states did not have this information already incorporated in their TIC forms, unlike compliance items such as income and rent.

Race and ethnicity data are requested for each household member. As explained in the previous section, data submitted at the individual level suffer from underreporting of properties, units, and household members. Furthermore, in accordance with fair housing laws, tenants are not required to report their race or ethnicity. States with the lowest reporting of this data for their active LIHTC property stock include Alaska (39 percent) and New Jersey ( 57 percent), with five other jurisdictions reporting less than 70 percent of their stock—District of Columbia, Illinois, Maryland, Massachusetts, and the U.S. Virgin Islands. Totals for New York account for almost 94 percent of its active LIHTC stock, even though HUD did not receive information for LIHTC tenants monitored by the New York City HPD, which accounts for a significant portion of unreported units for New York state.

Among the households and units reported, many suffered from an underreporting of household members. Recall from Table 3 that while most states reported all members, or nearly all members, of each reported LIHTC household, when compared to household size at certification, three states -Florida, New York, and Tennessee-submitted all household members for less than approximately one-half of their reported occupied units. The underreporting of household members across states led to the decision to include only tabulations of heads of household for race and ethnicity and for several other tabulations presented subsequently in this report. ${ }^{13}$

Table 4 shows the percentage of reported heads of household for whom race and ethnicity were submitted to HUD. The first column repeats the percentage of properties reported from Table 2 to provide perspective on the completeness for the entire active LIHTC stock in each state. ${ }^{14}$ Two statesFlorida and Ohio-did not provide race or ethnicity information for any heads of household. ${ }^{15}$ Five other states reported this information for less than 70 percent of their reported households-Nebraska (69 percent), New York ( 65 percent), Pennsylvania (51 percent), Utah (60 percent), and Wyoming (63 percent).

${ }^{\text {a }}$ Florida and Ohio did not provide race or ethnicity for any household members.
${ }^{\text {b }}$ States that reported race and ethnicity for less than 70 percent of reporting households.
c Does not include tenant data from the New York City Department of Housing Preservation \& Development.

## V. Disability Status

Tenant disability status is collected in accordance with the Fair Housing Act's definition of disabled. A tenant's response, or nonresponse, does not affect the tenant's ability to claim disability benefits or to request handicap-accessible features in the LIHTC unit. The Fair Housing Act defines a disability as a physical or mental impairment that substantially limits one or more major life activities, a record of such an impairment, or being regarded as having such an impairment. Definitions of physical and mental impairment are in 24 CFR 100.201. In compliance with the Fair Housing Act, tenants are not required to respond to this question.

Before the HERA data collection mandate, few states collected tenant disability status for the head of household or other household members. Thus, nearly all HFAs had to amend their TIC forms to request this information, which delayed their ability to report to HUD. Missing data or data coverage of disability status were similar to those for race and ethnicity, neither of which are used for programmatic purposes. Similar to all LIHTC tenant data, this information suffers from potential incomplete coverage of properties, units, and household members. As explained previously and shown in Table 2, data from two states-Alaska and New Jersey-included a fairly small percentage of their active LIHTC properties. In addition, the reported information for some states did not contain all household members, further limiting the ability of HUD to report disability status.

Table 5 provides household-level information on the presence of at least one tenant with a disability per household. The first column, Properties Reported, repeats data from Table 2. This column is included to enhance understanding of the coverage of properties in the state data. Florida, Kansas, and Wyoming did not report disability status for any household members. Further, Pennsylvania reported disability status for less than 20 percent of their reported households. The states with the highest percentage of households reporting at least one disability include Rhode Island (33 percent), Washington (29 percent), and Idaho (27 percent).

Table 6 reports disability status at the individual household member level. The first column, Properties Reported, repeats data from Table 2. The second column, All Household Members Reported, contains data from Table 5. The last two columns present strictly individual-level information, beginning with the share of reported individuals in that state for whom disability status is reported. The underreporting mentioned previously for Table 5 also applies to Table 6, likely skewing the estimate of individuals with disabilities downward from the actual percentage. By percentage of individual household members with disabilities, the states with the highest prevalence of disabilities include Rhode Island (20 percent), Washington (15 percent), Massachusetts (14 percent), and Idaho (14 percent).

## VI. Family Composition and Age

Many states use the LIHTC specifically to address affordable housing shortages for families and seniors. Thus, family composition and age are reported together, highlighting households with children and elderly members in Table 7.

HUD determines family composition based on the age of household members and their relationship to the head of household. The HUD LIHTC Tenant Data Collection Form requests relationship to head and date of birth for each household member. Relationship to head is used for program income determination because income from certain household members does not count toward annual household income. ${ }^{16}$ Some states did not collect date of birth for all LIHTC tenants before the HERA mandate, instead opting to collect the number of household members by age group. Thus, although similar information was collected, this information also required a change in some states' TIC forms. HUD uses the date of birth to determine the age of tenants as of the reporting date, December 31, 2017. The relationship to head of household is used to identify the head for households that are headed by an elderly person, or senior.

Identifying the presence of children and seniors in households requires having valid dates of birth for all household members. As reported previously, to determine whether all household members are reported, HUD compared the number of reported members for whom date of birth and other information is requested with the reported household size at certification. The first three columns of Table 7 provide information on data coverage of household members and date of birth. Florida did not provide dates of birth, preventing calculation of age. The first column represents the number of households in which the reported number of members equals the household size at certification. The second and third columns provide reporting rates for date of birth for heads of household and all members, respectively.

States with the highest percentage of reported heads of households of the age 62 or older include Pennsylvania (49 percent), Hawaii (47 percent), Maryland (46 percent), Rhode Island (46 percent), Illinois ( 45 percent), and New Hampshire ( 45 percent). States with the highest percentage of households with minors include Guam (55 percent), the U.S. Virgin Islands (51 percent), Mississippi (48 percent), South Dakota (47 percent), South Carolina (46 percent), and Arizona (46 percent).

## VII. Annual Household Income

Household income is a central part of LIHTC tenant qualification and ongoing compliance. To qualify for tax credits, owners of LIHTC properties must elect to maintain maximum income-qualifying limits of either 50 or 60 percent of Area Median Gross Income (AMGI). LIHTC property managers must submit detailed household income information to the administering HFA at tenant move-in and annually thereafter. To certify household income, states collect detailed income information for each household member on the state's TIC forms. The HUD LIHTC Tenant Data Collection Form requests the same income information as collected by states for compliance, although HUD requires only total annual household income. HUD does not require the submission of components of household income such as earned income or income from assets. The HUD form also does not require the submission of income for each household member. Because income limits can vary by property, depending on the percentage of AMGI an owner elects to enforce, state TIC forms and the HUD LIHTC Tenant Data Collection Form also request the applicable income limit and maximum percentage of AMGI for each unit.

Although all states receive household income information for compliance, not all states maintained this information electronically before HERA reporting requirements, especially for properties in the extendeduse period that have less strict income certification rules. These looser reporting rules and lack of data maintenance hindered the abilities of some HFAs to provide annual household income and related income limit information for all households. Because program rules do not require annual recertification for all units, HUD also requests the income certification date. The income tabulations in this report include only household incomes reported for 2016, 2017, or $2018 .{ }^{17}$ This method will exclude some units in properties with 100 percent low-income units and some properties in their extended-use period, because annual recertifications are not required.

Table 8 shows the median reported income of households and the distribution of income. In terms of data coverage, total annual household income was reported with certifications dates of 2016, 2017, or 2018 for 86.0 percent of households. Oregon and Tennessee did not report income, and Alaska, Guam, and New York reported income certified in these years for approximately one-half of households or less.

Comparing household income across states does not account for differences in cost of living, therefore, providing a somewhat skewed comparison. Comparing household income with AMGI provides a more informative assessment and provides measures of income more directly relevant for LIHTC program eligibility. HUD, however, does not request AMGI and to make this comparison. The AMGI must either be determined by address or derived from information provided on the LIHTC Tenant Data Collection Form, specifically the percentage of income or rent restriction ( 50 or 60 percent of AMGI) and the applicable income limit for each unit. The distribution provided in this report uses the latter method because it yielded a larger sample on which the distribution could be calculated.

As shown in Table 9, household annual income, certified in 2015, 2016, or 2017, was reported for 86.0 percent of units, but income plus the information needed to calculate AMGI was provided for only 61.1 percent of units. Although some of the units excluded from this calculation had incomes certified before 2015, most of these units were excluded because of missing the income limit or income restriction. Alabama, Indiana, Kentucky, Ohio, Oregon, Tennessee, and Texas did not provide the necessary information to make the calculation for any of their reported units.

a AMGI was derived by dividing the income limit by percent income restriction.
b Income certified in 2016, 2017, or 2018.
c Does not include tenant data from the New York City Department of Housing Preservation \& Development.

## VIII. Monthly Rental Payments

A critical goal of the LIHTC Program is to provide affordable housing by limiting the share of a household's income paid in rent, referred to as rent burden. The LIHTC Program restricts the maximum rent that can be charged for a unit to 30 percent of either 50 or 60 percent of AMGI, according to that chosen by the developer during the application process. Although the LIHTC Program sets a maximum rent, actual rents are often less and can fluctuate with market conditions. Unlike in most housing programs, income and rent limits are set for the unit and do not vary directly with tenant income. Thus, rent may exceed 30 percent of income at qualification. In addition, after a tenant has qualified for a unit based on the unit's income limits, increases or decreases in a tenant's household income do not result in corresponding changes in rent paid. The combination of these factors may result in the share of a household's income spent on rent varying substantially from 30 percent.

The HUD LIHTC Tenant Data Collection Form requests components of gross rent, which include tenantpaid rent, utility allowance, and other nonoptional charges. Table 10 shows the distribution of gross rent as a percentage of annual household income. To calculate this distribution, both household income and rent must be provided. As in the previous section, this section includes only household incomes certified in 2016, 2017, or 2018 . The first column of Table 10 lists the percentage of occupied units with both annual household income and gross rent. Overall, 85.0 percent of reported units included both income certified in 2016, 2017, or 2018 and rent. Alaska, Guam, Minnesota, and New York reported this information for less than two-thirds of their households. Oregon did not report data needed to calculate rent burden. Tennessee did not report the income certification date, which was necessary to make the calculation.

a Includes only households with income certified in 2016, 2017, or 2018.
${ }^{\text {b }}$ Ratio of tenant-paid rent to household income could not be calculated because total annual household income equals $\$ 0$.
c Alaska, Guam, Minnesota, and New York reported this information for only a small portion of their households. Oregon did not report data needed to make the rent burden calculation. Tennessee did not report income certification date, which was necessary to make the calculation.
${ }^{d}$ Does not include tenant data from the New York City Department of Housing Preservation \& Development.

## IX. Use of Rental Assistance

As shown in Table 9, 62 percent of LIHTC households earn 40 percent of AMGI or less, yet federal maximum unit rents are established to be affordable for households at 50 or 60 percent of AMGI. Various types of rental assistance-both project- and tenant-based assistance from HUD, the U.S. Department of Agriculture, and state programs-may partially fill this gap. The HUD LIHTC Tenant Data Collection Form requests the amount of rental assistance received for a unit.

Table 11 shows the use of rental assistance from all sources-federal, state, local, and nonprofit organizations-for reported LIHTC tenants. Sixteen states ${ }^{18}$ did not report any households that did not receive rental assistance-that is, households receiving \$0 of rental assistance-but did report a large percentage of households with an unknown status; that is, the amount of rental assistance was reported as missing. Although these states could not confirm, it is likely that "Not Reported" in Table 11 for these states, and possibly others, actually represents households that did not receive any rental assistance. Tennessee is the one state where reporting on any type of rental assistance was unavailable. Reporting was low for Guam (13 percent reporting) and Arizona (19 percent reporting).

The HUD LIHTC Tenant Data Collection Form also requests the programmatic source for federal rental assistance, which is shown in Table 12. Inconsistencies between the amount of federal rental assistance received and the reported source of rental assistance prevent a confident determination on the completeness of this information. The first column in Table 12 provides the percentage of units that received federal rental assistance; that is, the reported amount of federal rental assistance was greater than $\$ 0$. The second column shows the percentage of units for which the HFA identified the programmatic source of federal rental assistance. For most states, the source of federal rental assistance was reported, indicating that the household received assistance, for more units than for which a positive amount was provided. The 32 states ${ }^{19}$ highlighted in gray in Table 12 did not report the source of federal rental assistance for any households. On average, the programs contributing the most to rental assistance in LIHTC households across states include HUD tenant-based Housing Choice Vouchers (contributing 29 percent of rental assistance on average) and HUD Multi-Family Project Based Rental Assistance (contributing 24 percent of rental assistance on average).

HUD = U.S. Department of Housing and Urban Development. LIHTC = Low-Income Housing Tax Credit Program. USDA = U.S. Department of Agriculture ${ }^{\text {a }}$ Does not include tenant data from the New York City Department of Housing Preservation \& Development.
U.S. Department of Housing and Urban Development

Office of Policy Development and Research
Washington, DC 20410-6000

March 2020
EQUAL HOUSING
OQUAL HOUSING

[^0]:    a Tennessee did not report household size at certification. New York provided this information for less than one-half of its tenants. Alaska provided this information for about one-fifth of its tenants.
    ${ }^{\mathrm{b}}$ Florida provided information for only one member of each household.
    c Does not include tenant data from the New York City Department of Housing Preservation \& Development.

[^1]:    ${ }^{1}$ HFAs reported 327 LIHTC properties placed in service in 2016 with the 2017 properties. These properties were not previously reported.

[^2]:    ${ }^{2}$ This total includes the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands. Aside from its use of the Tax Credit Exchange Program, or TCEP, in 2009, American Samoa does not actively administer the LIHTC Program and is not counted here.
    ${ }^{3}$ The Development Authority of the North Country administers the LIHTC Program in Jefferson, Lewis, and St. Lawrence Counties, New York.
    ${ }^{4}$ Dakota and Washington Counties and the cities of Duluth, Minneapolis, Rochester, Saint Cloud, and Saint Paul each receive a portion of the state allocation.
    ${ }^{5}$ The suballocators in Minnesota monitor for compliance and, except for Dakota County, reported the 2017 tenant and property data directly to HUD.
    ${ }^{6}$ The District of Columbia and Massachusetts allocating agencies conduct compliance for their bond-issuing agencies.

[^3]:    ${ }^{7}$ Although HUD requested information for tenants as of December 31, 2017, some states provided the most recent income certification information, which was from 2018.
    ${ }^{8}$ HUD annually collects information on LIHTC properties placed in service during the previous calendar year. This information is available from https://lihtc.huduser.gov/.
    ${ }^{9}$ In addition to underreporting because of technicalities of determining placed-in-service status, several states (Alaska, New Mexico, and Tennessee) did not submit information in certain recent years. See the database at https://lihtc.huduser.gov/ for years of nonreporting.
    ${ }^{10}$ Properties are identified in the tenant data based on property name, property identification number (or PIN), city, and state.
    ${ }^{11}$ This total includes both vacant and occupied units.

[^4]:    ${ }^{12}$ The reporting of the head of household in the LIHTC program is merely for reference and is unrelated to status reported on individual income returns.

[^5]:    ${ }^{13}$ Included in these tabulations are household members who are not reported as heads but are the only reported household members. Also, if a head of household is not indicated, the first member reported on the submitted form is included in these tabulations.
    ${ }^{14}$ For example, although the Alaska Housing Finance Corporation submitted both race and ethnicity data for 98.5 percent of reported heads of household, the tenant data for Alaska include only 38.9 percent of its LIHTC stock.
    ${ }^{15}$ Texas collects race and ethnicity information according to different standards. For Texas state tabulations, see https://www.tdhca.state.tx.us/housing-center/docs/16-HSR.pdf.

[^6]:    ${ }^{16}$ For example, income of live-in aides and earned income of dependents do not affect income eligibility.

[^7]:    a The percentage of occupied units in which reported household members equal reported household size at certification.
    ${ }^{\text {b }}$ Does not include tenant data from the New York City Department of Housing Preservation \& Development.

[^8]:    ${ }^{17}$ Although HUD requested information for tenants as of December 31, 2017, some states, primarily Kentucky, Michigan, and Texas, provided the most recent income certification information, which was 2018.

[^9]:    ${ }^{\text {a }}$ Alaska, Guam, New York, Oregon, and Tennessee reported household income for less than 50 percent of reported households. For most households, income was reported without the certification date. This report only includes incomes certified in 2016, 2017, or 2018 in the tabulations.
    ${ }^{\text {b }}$ Does not include tenant data from the New York City Department of Housing Preservation \& Development.

[^10]:    ${ }^{18}$ Arizona, Colorado, Florida, Guam, Louisiana, Maine, New Hampshire, New Mexico, North Carolina, Oregon, Rhode Island, South Carolina, South Dakota, Tennessee, Vermont, and Virginia.
    ${ }^{19}$ Arizona, Colorado, Delaware, Florida, Georgia, Guam, Iowa, Kansas, Kentucky, Louisiana, Maine, Michigan, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, North Dakota, Oklahoma, Puerto Rico, Rhode Island, South Carolina, South Dakota, Tennessee, Utah, Vermont, Virginia, Wisconsin, and Wyoming.
