Introduction

This document contains Appendixes G, H, I, and J of the initial report on the U.S. Department of Housing and Urban Development (HUD) Rent Reform Demonstration. The initial report describes the demonstration, the background characteristics of families enrolled in the study, and the initial implementation of the demonstration program. The HUD Rent Reform Demonstration is a random assignment study of changes to the Housing Choice Voucher program's rent rules. A longstanding public policy goal has been to identify an alternative system that would be simpler and less expensive to administer and that would also encourage tenants to increase their employment rates and earnings and reduce their reliance on housing subsidies. The new rent policy's goal is to allow for working voucher holders to keep more of their earnings. Under current rules, voucher holders must report any income increases at least annually. Under the new policy, voucher holders would

not need to report any income increases for 3 years. During that 3-year period, any increase in earnings the family achieves will not cause the amount of rent and utilities it pays to go up. Besides reducing the need for annual recertification, the policy will simplify the process of setting a family's payment and subsidy amounts by eliminating deductions and allowances from the calculation and applying a lower percentage of income (28 percent) to a family's gross income. The new policy will include a minimum rent, ranging from \$50 to \$150 per month, depending on the housing agency—but that rent can be waived under a hardship remedy. Families for whom the minimum rent would create an excessive burden would not be required to pay it. In addition, the policy includes other safeguards to protect families by reducing their required rent payments if their incomes decline. Complete details on the HUD Rent Reform Demonstration are available in the full report.

¹ James Riccio, Victoria Deitch, and Nandita Verma. 2017. A New Way to Subsidize Housing Costs and Support Work: Launching the Rent Reform Demonstration for Families with Housing Vouchers. New York: MDRC.

Appendix G. Baseline Survey Instrument

Study participants completed the baseline survey voluntarily with public housing agency (PHA) staff members when they enrolled in the study. The survey solicited information on a broad range of demographic and other characteristics, including family composition, income, employment status, perceived barriers to employment, and education level. The survey includes items that have been used in other national surveys—or similar baseline surveys in other program evaluations—and it provides information generally not available in the agency

administrative records. This report uses the baseline survey data to describe the characteristics of the families in the demonstration at the time they enrolled in the study.

This appendix includes the baseline survey instrument used in Lexington. The baseline survey is uniform across all study PHAs, with the exception of a few items. For example, PHA client- identifier fields may vary from one PHA to the next, and the survey also customizes the local names of cash assistance programs, such as Temporary Assistance for Needy Families.

HUD RENT REFORM DEMONSTRATION BASELINE INFORMATION FORM (LEXINGTON)

NOTE: This information is provided by the voucher holder / head-of-household.

1101E. This information is provided by the voiciner holder / nead-or-nousehold.
Personal Identifiers
1. Head-of-Household's Name 1.A First Name: 1.B Middle Name: 1.C Last Name:
2. Client ID /Entity ID /Applicant ID:
3. Head-of-Household's Social Security Number:
4. Head-of-Household's Date of Birth:

Personal Finances

- 15. Do you currently have a savings or checking account at a bank or a credit union?
 - 10 Yes
 - 2**O** No
 - 3O No answer

16. How much money do you currently have saved?

This includes money at home; in a savings, checking, credit union, or money market account; and certificates of deposit. Do not include pension funds or retirement accounts.

- $0 \ \mathbf{C}_{1}$
- 20 \$1- \$500
- 3O \$501-\$1,000
- 40 \$1,001-\$3,000
- 5**Q** \$3,001-\$5,000
- 60 \$5,001-\$10,000
- 70 \$10,001-\$20,000
- 80 More than \$20,000
- ₉O No answer
- 17. When you think about all your loans including, for example, money borrowed from friends or family, car loans, credit card debt, and student loans, what is the total amount you owe?
 - 0\$ O₁
 - 20 \$1- \$500
 - 3O \$501-\$1,000
 - 40 \$1,001-\$3,000
 - 50 \$3,001-\$5,000
 - 6**3** \$5,001-\$10,000
 - 70 \$10,001-\$20,000
 - 80 More than \$20,000
 - 90 No answer

Educational Attainment

_ 1100000000000000000000000000000000000
18. What is the highest level of education that you have completed?
Grade 9 or less
20 Grade 10 or grade 11
3O Attended grade 12 but did not receive high school diploma or GED certificate 4O GED certificate
50 High school diploma
60 Some college
70 Associate's or two-year degree
80 Four-year college degree or higher 90 No answer
90 IVO diiswei
19. Are you currently taking college courses for credit toward an Associate's degree or Bachelor's degree?
10 Yes
20 No
3O No answer
20. Do you have any type of trade license or training certificate?
For example: A Commercial Driver's License (CDL), Certified Nursing Assistant (CNA), or some other kind of certificate.
10 Yes
2O No
3O No answer
21. Are you currently taking any training courses or education classes to improve your skills, help you do a job, or find employment?
Please include things like computer training and basic skills courses or classes.
O Yes
2O No
30 No answer
22. Are you currently receiving job search assistance (such as resume help, interview assistance, etc.) from a housing authority, temp agency, or any other program or organization to find a new or additional job?
10 Yes
20 No
30 No answer

Employment Status			
23. Are you currently working for pay or self-employed?			
10 Yes [Go to 24] 20 No [Go to 28] 30 No answer[Go to 28]			
24. Which situation best describes your current employment?			
10 I work for pay at a regular job 20 I am self-employed 30 I work at a temporary or seasonal job 40 No answer			
25. How many jobs do you currently have?			
10 1 20 2 30 3 40 4 or more 50 No answer			
26. Counting all of your current jobs or businesses, how many hours do you typically work per week?			
If your hours of work vary, please say the <u>average</u> number of hours per week that you worked during the past 4 weeks. Your best guess would be fine.			
Hours			
[If you don't know the exact number of hours, please enter 99 above and check one range amount below] 26.a			
1 - 20 hours 2 - 21 - 34 hours 3 - 35 - 48 hours 4 - 49 or more hours 5 - No answer			

27. Counting all of your current jobs or businesses, how much do you earn before taxes?
□ No Answer
Pay: \$
Per:
10 Hour 20 Day 2.4 Number of days per week of work
3 Week 4 Every two weeks 5 Twice per month 6 Month 7 Year 8 Other 8.A Specify
28. In the past 12 months, about how many months have you worked for pay or earned
money from self-employment?
Count any month in which you worked at least one day part-time or full-time.
55© Did not work at any time 1© 1 Month 2© 2 Months 3© 3 Months 4© 4 Months 5© 5 Months 6© 6 Months 7© 7 Months 8© 8 Months 9© 9 Months 10© 10 Months 11© 11 Months 12© 12 Months 13© No answer

29. Could you use public transportation (such as a bus, train, subway, or light-rail) to get to work, if necessary? 10 Yes 20 No 30 No answer 30. Do you have or could you borrow a car, van, or truck, or get a ride to get to work, if necessary? 10 Yes 20 No 30 No answer
Child Care
31. Do you have any children under the age of 13 for whom you are responsible and who usually live in your household at least two nights a week?
10 Yes [Go to 32] 20 No [Go to 37] 30 No answer [Go to 37]
32. Do you <u>use</u> any of the following programs or people to take care of your child(ren) while you are at work or attending a class, school, or job training?
AO Yes [Check all that apply]
Relative (grandparent, aunt, uncle, sibling of the child, etc.) Unrelated adult in your home or another home Center-based preschool care (child care center, daycare, nursery school, Head Start, preschool, after-school or before-school program) After-school or before-school program or, when school is out, a summer camp Other

- Campio 6/25 (Cota) - 5,000)	0,010	0,000

^a Income-source categories are as defined in the HUD-50058 form. Wages include one's own business, federal wages, public housing agency (PHA) wages, military pay, and other wages. Welfare includes general assistance, annual imputed welfare income, and Temporary Assistance for Needy Families. SSI is Supplemental Security Income. Other income sources include child support, medical reimbursement, Indian trust/per capita, unemployment benefits, and other nonwage sources.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. A two-tailed t-test was applied to differences between research groups. Statistical significance levels are indicated as follows: **= 5 percent; * = 10 percent. Data were collected at the most recent recertification before random assignment.

^b TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is the family's contribution toward the gross rent. It may be the TTP or higher, depending on the unit selected by the family.

^a Income-source categories are as defined in the HUD-50058 form. Wages include one's own business, federal wages, public housing agency (PHA) wages, military pay, and other wages. Welfare includes general assistance, annual imputed welfare income, and Temporary Assistance for Needy Families. SSI is Supplemental Security Income. Other income sources include child support, medical reimbursement, Indian trust/per capita, unemployment benefits, and other nonwage sources.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. A two-tailed *t*-test was applied to differences between research groups. Statistical significance levels are indicated as follows: **= 5 percent. Data were collected at the most recent recertification before random assignment.

 $^{^{\}mathrm{b}}$ TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is the family's contribution toward the gross rent. It may be the TTP or higher, depending on the unit selected by the family.

^a More than one ontion could be selected, so subcategories may sum to more than the	a total	

^a More than one option could be selected, so subcategories may sum to more than the total.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. Percentages may sum to more than 100.0 for questions that allow more than one response. A two-tailed *t*-test was applied to differences between research groups. Statistical significance levels are indicated as follows: *** = 1 percent; **= 5 percent.

Appendix I. Adjustments to the Impact Sample

Housing agency records were used to randomly assign families in the Rent Reform Demonstration. Some families who were included in the random assignment process were subsequently excluded from the study's research sample. They were excluded for several reasons, the most important of which concerned missing or inaccurate eligibility-related information. A review of the data files conducted by the housing agencies and MDRC found that some critical information (such as disability status) available at the time of random assignment was missing or incorrect—a problem that occurred because of lags in data entry or verification, problems associated with an agency's rent-software upgrades, or other reasons. In such cases, had that information been available when eligible families were being identified for the study, the family would not have been randomly assigned.

Families were also dropped from the sample if, after random assignment but before the date when their new total tenant payments (TTPs) and subsidies were scheduled to become effective, their participation in the Housing Choice Voucher program ended or they moved to the jurisdiction of another housing agency that was not participating in the Rent Reform

Demonstration. These families were excluded because they were not given a full orientation to the study and, consequently, were not fully informed of their right not to have their personal data used in the evaluation. A small number of other families were dropped from the sample because they exercised the option not to have their data used in the evaluation.

In total, 580 households (8 percent) were excluded from the analysis sample—348 because they were ineligible at the time of random assignment, 218 because they exited the voucher program or moved away, and 14 because they requested that their data not be used in the evaluation. Appendix Table I.1 shows the number excluded for each exclusion category by public housing agency, for both research groups, and in each month when families' new TTPs and subsidies were scheduled to take effect. Note that although some small differences in the frequency of exclusions are evident between the new rent rules group and the existing rules group, dropping these cases did not undermine the overall balance between the two research groups in their background characteristics as measured using housing agency data (see Appendix Tables H.1 through H.7).

Notes: Public housing agency (PHA) data were not received for 15 families (or 0.2 percent of the impact sample). These families are not currently counted as part of the impact sample and are not included in any of the tables that use PHA data. The missing data are for 13 Washington, D.C., families and 2 Louisville families. MDRC will continue to work with the PHAs to understand the reason the data is missing and will include these families in future reports, if possible. The ineligible and withdrawal categories do not overlap.

Appendix J. Response Analysis for the Baseline Survey

The baseline survey for the Rent Reform Demonstration provides information about families in the study sample that is not available from housing agencies' records. It covers topics such as the head of household's educational background, participation in education and training, hours of employment, job characteristics (if working), barriers to employment, health insurance coverage, and use of childcare, along with the family's financial circumstances, material hardship, and other characteristics. The survey was offered to all heads of households in the Rent Reform Demonstration during the initial recertification process. However, the survey was voluntary and not all families completed it. Consequently, it is important to understand whether, on average, survey respondents and nonrespondents differ in systematic ways. If they do, it will affect how well the survey findings represent the full research sample. To make this assessment, the study team used data from the housing agencies' administrative records that were available on all families who were offered the baseline survey, including whether or not they completed it, to compare a number of important background characteristics of respondents and nonrespondents. This appendix presents the results.

Survey Administration

The baseline survey was administered to families during their initial recertification meetings at the housing agency following random assignment. In most cases, a family would complete first U.S. Department of Housing and Urban Development Form 50058 for the housing agency, and then the baseline survey. Some families who were unable to complete the survey at that initial interview were allowed to complete it at a later time but no later than the date on which their new total tenant payments (TTPs) and rent subsidies were scheduled to become effective. Every family who completed the baseline survey was given a \$25 gift card as an expression of appreciation for their time and effort.

In an effort to increase response rates, families who were randomly assigned late in the study enrollment period were allowed to complete the baseline survey over the phone with study team members. In addition, in Louisville, where families in the existing rent rules group were not required to meet with staff members in person during the annual recertification process, the housing agency made a special effort to interview families in that group by telephone if they chose not to complete the survey at the housing agency's office.

Because the administration of the survey was aligned with families' recertification interviews, the dates of survey completion span several months. Survey administration began in March 2015 in San Antonio, April 2015 in Louisville and Lexington, and May 2015 in Washington, D.C. The final interviews were completed in April 2016.

Characteristics of Respondents and Nonrespondents

Overall, 5,263 families responded to the baseline survey across the four demonstration public housing agencies (PHAs), leading to a 79-percent response rate. The completion rates varied widely among the PHAs, as shown in Appendix Table J.1, from a high of 89 percent in Lexington to a low of 71 percent in San Antonio.

Appendix Table J.1. Baseline Survey Response Rate, by Public Housing Agency (PHA)

Site	Response Rate (%)
All PHAs	79.0
Lexington	89.0
Louisville	81.6
San Antonio	71.3
Washington, D.C.	78.7

Note: Response rate shows the percentage of the impact sample who completed the baseline survey.

Source: MDRC calculations using baseline survey data

Selected characteristics of survey respondents and nonrespondents measured using PHA data are compared for each PHA in Appendix Tables J.2 to J.5. The tables show whether the differences between the two groups are statistically significant, using a *t*-test for continuous variables and a chi-squared test for categorical variables.

Lexington

In Lexington, the PHA with the highest survey response rate (89 percent), several differences between survey respondents and nonrespondents stand out. (See Appendix Table J.2.) Overall, survey respondents earned less than nonrespondents. For example, 55 percent had no earned income compared with 43 percent of nonrespondents. Moreover, survey respondent families were likely than nonrespondents to have annual earnings of \$20,000 or more (15 versus 21 percent). Finally, 21 percent of respondent households had income from Social Security, Supplemental Security Income (SSI), or pensions, compared with only 10 percent of nonrespondent households.

^a Income-source categories are as defined on the HUD-50058 form. Wages include one's own business, federal wages, public housing agency (PHA) wages, military pay, and other wages. Welfare includes general assistance, annual imputed welfare income, and Temporary Assistance for Needy Families. SSI is Supplemental Security Income. Other income sources include child support, medical reimbursement, Indian trust/per capita, unemployment benefits, and other nonwage sources.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. A two-tailed *t*-test was applied to differences between research groups. Statistical significance levels are indicated as follows: ** = 5 percent. Square brackets indicate that the chi-square test may not be valid due to small sample sizes within the cross-tabulation distribution. Data were collected at the most recent recertification before random assignment.

Source: MDRC calculations using PHA data

Louisville

In Louisville, 82 percent of families completed the baseline survey. Respondents differ from nonrespondents in a variety of ways. For example, as shown in Appendix Table J.3, respondent families were somewhat more likely than nonrespondents

to have earned income (40 versus 31 percent) and income from child support (30 versus 25 percent). A higher percentage of respondent families have female heads of households (96 percent compared with 93 percent of nonrespondents), and the heads of households were also older on average (39 compared with 37 years old).

^a Income-source categories are as defined on the HUD-50058 form. Wages include one's own business, federal wages, public housing agency (PHA) wages, military pay, and other wages. Welfare includes general assistance, annual imputed welfare income, and Temporary Assistance for Needy Families. SSI is Supplemental Security Income. Other income sources include child support, medical reimbursement, Indian trust/per capita, unemployment benefits, and other nonwage sources.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. A two-tailed *t*-test was applied to differences between research groups. Statistical significance levels are indicated as follows: *** = 1 percent; ** = 5 percent; * = 10 percent. Square brackets indicate that the chi-square test may not be valid due to small sample sizes within the cross-tabulation distribution. Data were collected at the most recent recertification before random assignment.

^b TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is a family's contribution toward gross rent. It may be the TTP or higher, depending on the unit selected by the family.

San Antonio

San Antonio had the lowest baseline survey response rate (71 percent) of the four demonstration PHAs. The characteristics of survey respondents and nonrespondents, however, were relatively similar, as shown in Appendix Table J.4. The average age of the head of household was the most pronounced difference between these two groups, and even then, survey-respondent

household heads were only about a year younger than nonrespondents (36 years old for the respondents, on average, compared with 37 for the nonrespondents). The differences in the proportions who fell into different age categories are larger. For example, a lower proportion of survey respondents (34 percent) than nonrespondents (40 percent) were between 35 and 44 years old, whereas more respondents were between 25 and 34.

Washington, D.C.

In Washington, D.C., 79 percent of families responded to the baseline survey. Appendix Table J.5 shows that several differences emerged between respondents and nonrespondents. For example, 48 percent of respondent families had more than one adult compared with 54 percent of nonrespondent families.

Respondent families were less likely to have current annual incomes in the highest category (28 percent of respondents versus 34 percent of nonrespondents had current annual incomes of \$20,000 or more), and they had lower annual earned incomes on average (\$26,416 versus \$28,541). In addition, survey respondents had lower average TTPs than nonrespondents (\$325 compared with \$379).

 $^{^{\}mathrm{b}}$ TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is a family's contribution toward gross rent. It may be the TTP or higher, depending on the unit selected by the family.

Comparison Between the Research Groups in the Survey Respondent Sample

Selected baseline characteristics for survey respondents in the new rent rules and existing rent rules groups are shown in Appendix Tables J.6 through J.9. For three of the four PHAs (those in Lexington, Louisville, and Washington, D.C.), very few differences are evident between survey respondents in the new rent rules group and those in the existing rent rules group.

The differences were more pronounced in San Antonio (although even here, the two groups are much more similar than different). Appendix Table J.8 shows that in San Antonio, families with more than one adult made up 35 percent of the respondents in the new rent rules group compared with 29 percent of the respondents in the existing rent rules group. The two groups also had different sources of income. New rules respondents were more likely than existing rules respondents to have income from Social Security, SSI, or pensions (26 versus 21 percent), and were more likely to be recipients of

child support (40 versus 35 percent). The new rent rules group respondents also included a somewhat smaller proportion of Hispanic or Latino families (73 percent compared with 77 percent of the existing rent rules respondents).

Predicting Survey Response

Another way to explore differences between survey respondents and nonrespondents is through a logistic regression analysis. This analysis takes into account a variety of characteristics simultaneously. In essence, it shows whether it is possible to predict that a family would be a respondent to the baseline survey on the basis of the characteristics of all families in the research sample, using administrative records data available from housing agencies. If the analysis shows a statistically significant association between completing the survey and being in the new rent rules group (rather than in the existing rent rules group), or between completing the survey and having a particular background characteristic, one would conclude that the survey respondents and nonrespondents do, in fact, differ in a systematic and predictable way.

^b TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is a family's contribution toward gross rent. It may be the TTP or higher, depending on the unit selected by the family.

^a Income-source categories are as defined on the HUD-50058 form. Wages include one's own business, federal wages, public housing agency (PHA) wages, military pay, and other wages. Welfare includes general assistance, annual imputed welfare income, and Temporary Assistance for Needy Families. SSI is Supplemental Security Income. Other income sources include child support, medical reimbursement, Indian trust/per capita, unemployment benefits, and other nonwage sources.

Notes: Sample sizes for specific outcomes may vary because of missing values. Rounding may cause slight discrepancies in calculating sums and differences. A two-tailed *t*-test was applied to differences between research groups. Statistical significance levels are indicated as follows: ** = 5 percent. * = 10 percent. Square brackets indicate that the chi-square test may not be valid due to small sample sizes within the cross-tabulation distribution. Data were collected at the most recent recertification before random assignment.

^b TTP is the minimum amount a family must contribute toward rent and utilities regardless of the unit selected.

^c Family share is a family's contribution toward gross rent. It may be the TTP or higher, depending on the unit selected by the family.

Lexington

As shown in Appendix Table J.10, the analysis of the Lexington sample found that the overall statistical model is able to predict who would respond to the survey, suggesting that the probability of completing the survey was affected by a family's measured characteristics and was not simply a matter of chance. Two characteristics in particular have statistically significant, independent associations with being a survey respondent: being a family assigned to the new rent rules group and being a family with no earned income.

Louisville

As shown in Appendix Table J.11, the analysis of the Louisville sample shows that four statistically significant characteristics predict the likelihood of being a respondent to the baseline survey: members of the new rent rules group, female heads of households, and older heads of households were more likely to complete the baseline survey, whereas families with no earned income were less likely to complete the survey. The overall logistic regression model is also statistically significant.

Appendix Table J.10. Estimates From a Logistic Regression for the Probability of Being a Baseline Survey Respondent in Lexington

Variable	Parameter Estimate	Odds Ratio	p-Value
Family baseline measures			
Intercept	1.773		0.055*
New rent rules group	0.743	2.101	0.001***
Female head of household	- 0.138	0.871	0.826
Family income	0.000	1.000	0.772
Family share	0.000	1.000	0.782
Has a child age 5 or under	- 0.391	0.676	0.120
Number of children in the family	0.016	1.016	0.856
No earned income	0.525	1.690	0.053*
Black, non-Hispanic/Latino	0.338	1.403	0.192

San Antonio

As shown in Appendix Table J.12, the analysis of the San Antonio sample found that having fewer children and having younger heads of households made it more likely that families would be respondents to the baseline survey. Overall, however, the logistic regression model indicated that the baseline survey respondents were not different from nonrespondents.

Washington, D.C.

As shown in Appendix Table J.13, no statistically significant relationships emerged between the characteristics of Washington, D.C., families and their likelihood of completing the baseline survey.

Appendix Table J.12. Estimates From a Logistic Regression for the Probability of Being a Baseline Survey Respondent in San Antonio

Variable	Parameter Estimate	Odds Ratio	p-Value
Family baseline measures			
Intercept	1.656		0.000***
New rent rules group	- 0.127	0.881	0.218

Conclusion

The survey response analysis shows that the background characteristics of families who completed the baseline survey differ somewhat from those who did not. These differences reduce the degree to which data from the survey describe the full research sample. Moreover, the respondents in the new rent rules group differ in some ways from those in the existing rent rules group. Future reports will discuss how these findings affect the ways the background survey data are used in evaluation's impact analysis.²

The degree to which respondents differ from nonrespondents varies among PHAs, as does the degree to which the new rent rules group respondents differ from the existing rent rules group respondents. The background measures that show differences also change from PHA to PHA. The samples from some PHAs show few meaningful differences. This lack of a consistent pattern across the PHAs suggests that, overall, the findings from the baseline survey can provide important insights about the characteristics and circumstances of the full research sample of the Rent Reform Demonstration, although they should be viewed with some caution.

² For example, these differences may make it inadvisable to use the baseline survey data as covariates in calculating regression-adjusted impact estimates or in defining subgroups, except for certain exploratory analyses. For those purposes, the impact analysis will rely primarily on the background-characteristics data from the housing agencies' administrative records, which are available for all families in the impact sample.
